A Compendium of All Knowledge of the Sotiran Universe

Above: Galaxy of Sotiris~ By Exozen

Introduction

In this document you will find all information pertaining to the galaxy of Sotiris. There is a lot to cover, and not everything will be available at once. As the story progresses more will be added and new sections/sub-sections will be created when the need arises. The more a subject is touched on in the story the more detailed a certain subjects summary may become, so information will be expanded upon and updated regularly in relation to the story itself. As always with my work, I hope everything is interesting and enjoyable to read. Thank you for taking the time to immerse yourself in the world of Sotiris!

Cast of Characters:

In this first section we will be covering the cast of characters present in the universe at this time. As more characters are introduced their profiles will be added here, and any important information that goes along with them. As more insight on characters and their quirks are revealed these profiles will become more fleshed out and advanced.

Her body has generous curves and is quite muscular despite her petite appearance. Although there are variously sized spines at many points on her body the largest are along her spine at at her elbows. Thicker, armor-like scales cover her forearms, shins, and back, as well as her tail.
