ABSTRACT

Introduction: Provide 1–3 sentences introducing the context of the study. Briefly explain the biological problem, significance, or knowledge gap your research addresses. Please use language accessible to a general scientific audience. Clearly state the aim(s) or hypothesis of the study.

Methods: Briefly describe the methodology used (organisms, sampling, experimental techniques, analytical tools, etc.) so readers can understand how the study was conducted. Provide a succinct summary of the approach used.

Results: Present the main findings with specific data or trends. Include only key quantitative or qualitative results—no raw data or overly detailed methodology here.

Conclusion: Summarize the implications of your findings. Highlight the contribution to the field or potential applications.
