How Could I Create The World's First One Person Loading Kayak Carrier?

In pondering back what got me to this place was an affection for tinkering. I was perpetually discontent with the manner in which things were and I constantly needed to improve something less demanding or.

Advancement Out Of Necessity For Fishing and Kayaking Transportation

In my grown-up life nothing extremely changed, so when I begun kayak angling years prior and acknowledged that it was so difficult to get a kayak up over the top of the vehicle or SUV, I knew there must be a superior way. I went to Harbor Freight and began to assemble a trailer, which I did, yet a trailer wasn't the ideal arrangement as you need to store them, they have parts that can turn sour, tires that can have victories, plates to pay for, and challenges with stopping them.

Where Can I Buy A Better Kayak Roof Top Carrier Online?

I kept searching for a superior arrangement, so I scoured the web searching for something that made my life somewhat simpler. Nothing I found in that look appeared to hit the check. I had this thought in my mind and I figured I would simply need to make something myself. It took a planned family excursion to Florida to inspire me to begin.

The resort we booked didn't permit trailers and I needed to have the capacity to take my kayak to do some angling as I'm not by any stretch of the imagination a devotee of lying on the shoreline. My first stop was an excursion to the neighborhood handyman shop where I purchased the materials I expected to begin assembling the vision that I found in my mind, which was of a stacking framework that could without much of a stretch be put on most SUV's or vans. It likewise should have been effectively removable to have the capacity to get in the carport.

Making A Simple Roof Rack Kayak Loading System, That One Person Can Use

I needed to have the capacity to anchor my kayak without creeping up over my truck. All the lashing should have been done on the ground before the kayak went up. On February first of 2017, I begun what might turn into the EZ Rec Rack. My better half probably had a sense this was something and with some consolation from her, I started chipping away at the rack in my carport.

What Is The EZ Rec Rack Kayak Loader Made Out Of?

By February fifteenth I had a working model. Since I could weld steel, the primary model was made out of this material. I immediately understood this was too overwhelming and not salt water benevolent. To hit the check, it must be something that was light enough to where it didn't over load the cross bars without anyone else's input and could hold up to the components. Powder covered aluminum was the arrangement and what they are made out of today.

Helping Outdoorsy People Like Myself Is Our Passion. Our Aim Is To Be The Industry Leader In Roof Top Carriers For Kayaks and More

I was encouraged to complete a patent hunt, which I would not like to do as I was certain there was something on the planet like this and I would not like to spend the cash. The pursuit demonstrated that there was not at all like it! Around 11 months after the fact I had a US patent. From that point forward, I've been tweaking the rack to make it the ideal stacking framework. I am currently prepared to impart it to the world in would like to make others' lives somewhat less demanding, much the same as mine.
