

Contact News Outlets

Local and national news outlets haven't done enough to inform the public about the severity of climate change and ecological breakdown and the extent to which they threaten our health, safety, and survival.

When we experience extreme weather events, meteorologists often fail to explain that worsening floods, droughts, crop failures, and other extreme weather events are caused by global heating caused by the continued burning of coal, oil, and natural gas, and the destruction of critical ecosystems.

The job of our media is to make the public aware of climate change so we can collectively hold businesses, fossil fuel executives, and our elected officials accountable for climate inaction.

Take Action

Send a letter to the editor of your local and national papers asking them to do a better job reporting on climate science, local and national climate activism, explaining the link between increasingly extreme weather events and rising emissions, and the need to hold elected officials accountable for climate inaction.

Contact your local meteorologist asking them to explain that weather events are becoming more frequent and extreme because of the continued burning of coal, oil, and natural gas.
