

Glitches in the Matrix?

I am going to place the image for your review and then post what I noticed underneath. Let me know if you see/find anything else. Please note that 1 frame is equal to 1 press on the arrow up key for navigation on Google Earth. I'm just using the term frame to make my life easier. Not sure if these pics will allow you to zoom in so I am sending the folder of pics to you as well. Here we go....

This is what Google Earth is currently showing when you walk up Connecticut Ave NW near Comet Pizza

Aside from the Besta Pizza pedophile logo, everything here looks kosher right? Wrong.... The following images were captured in the early hours of 12/15/16 and the images are still visible if you simply walk around the area on Google Earth.

Things to note:

There are 3 “free” paper stands

Mystic Beverages on bus/truck

Business next to Comet – Marvelous Market – the name of it is warped. Found this quick

Free Email Addresses: Wi... X harvard phone number - X mary clams market wash X Marvelous Market - CLO X little red fox Connecticut X

This Market is closed, and is now the little red fox. Look at the current street view for little red fox, image says August 2014. Keep this in mind as we progress..

Ok so from the image with the 3 paper stands, I literally moved up one frame and the street view turned to this....

Things to note:

Bus has vanished

Only 1 free paper thing

Marvelous Market has become little red fox. That was fucking fast.... The way to access this glitch is to approach comet pizza from the side street next to Exxon gas and keep walking straight into the glitch. A quick look at the stores fronts posted in this glitch.

Now onto the next image which is taken from the intersection right near Comet

Things to note:

McCollough Construction sign is on the building next to Comet and there are benches out front. The Chevy Chase Art Gallery sign – they were holding a SPHERE exhibit (I searched all their social media accounts and could not find a promotion for this only for a GROUP exhibit) This leads me to believe that the exhibit was before the gallery started using social media – everyone promotes their shit online now.

Their website: <http://www.chevyCHASEartgallery.com/index.html>

On the Pole to the left there is a sign, close up image will follow.

Zoom in on Comet – Sign is warped and the coloring of the building is unusually dark.

There is no for sale signs posted on the property next to the art gallery. (for future reference)

Sign Close up is Elissa Silverman. Notice how the corner of the sign is blurred.

They forgot the other side of the intersection though.....

Look close...

Idiots.

Elissa Silverman was elected 2014... https://ballotpedia.org/Elissa_Silverman

Back to that same intersection just a different angle....

Things to note:

McCollough construction sign is gone from the building, so are the benches.

The sphere exhibit sign is gone

The building next to the gallery is for sale

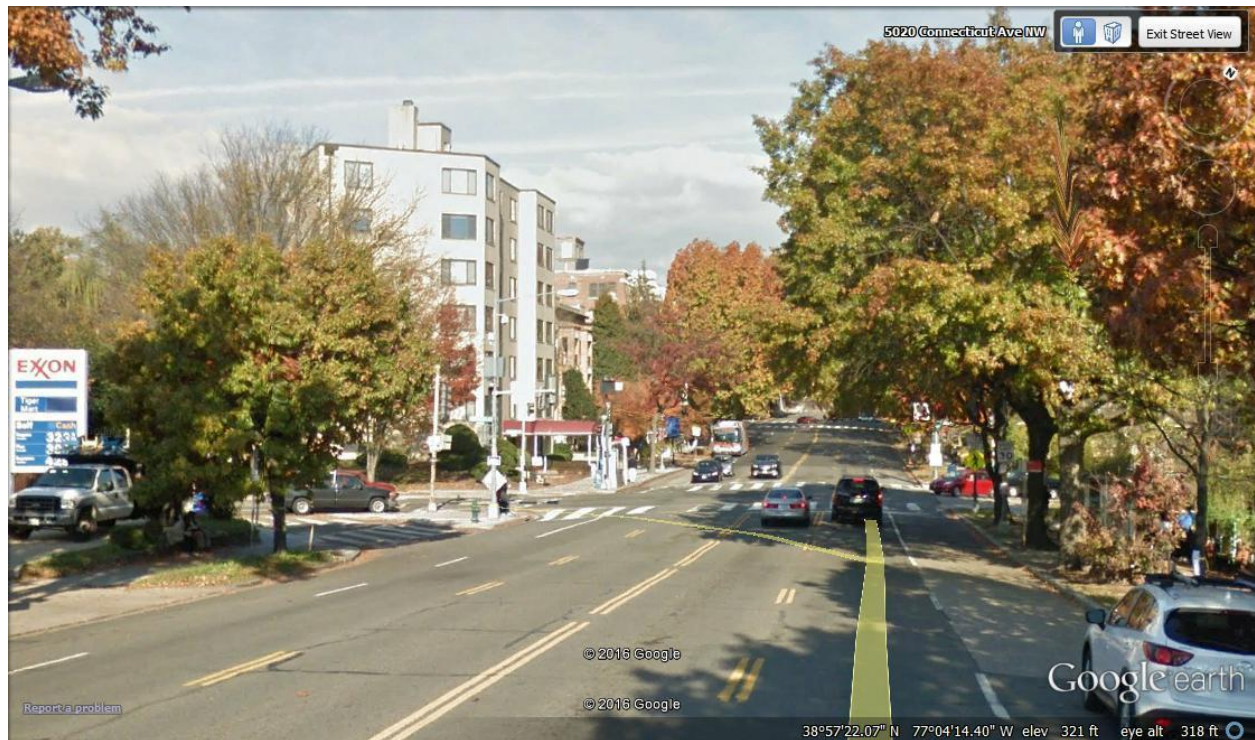

Notice the color of the Comet building and the little red fox – they are both much lighter than they were in the prior image from this intersection. If you put the images side by side this is very noticeable.

Same intersection slightly different angle...

Looks normal right? Look to the right of the for sale sign Copyright looks to say 2015 and now look at the second floor of the construction company window... copyright looks to say 2016. Having trouble seeing if it is the window sill which is making the 6 look like a 5 or if it is 2015. If you zoom in too far it becomes obscure and hard to decipher. Figured a second pair of eyes would help.

Moving on.... Across the street from Comet is an Exxon Mobil

Things to note:

The color of the foliage

Price of gas: Regular is \$3.23

Same gas station different angle.....

Things to note:

If you come from this direction the price of gas is \$4.35

This record high price of gas was set on July 6, 2008 according to this source:

<https://www.cantwell.senate.gov/news/press-releases/cantwell-calls-on-ftc-to-investigate-washington-state-gas-price-spike>

The store fronts – specifically the little Red Fox – the sign seems very off to me.

I kept my position and looked to the right, this is the image of the intersection.

Things to note:

Copyright on Pepsi truck says 2014

These vehicles came out of nowhere. At no other frame were these seen coming up Connecticut Ave

There is a real 'glitch' in the middle of the Pepsi truck. Normal glitches are slight distortions not complete butchering of business names (Marvelous Market)

I moved my position back one frame and captured the next image

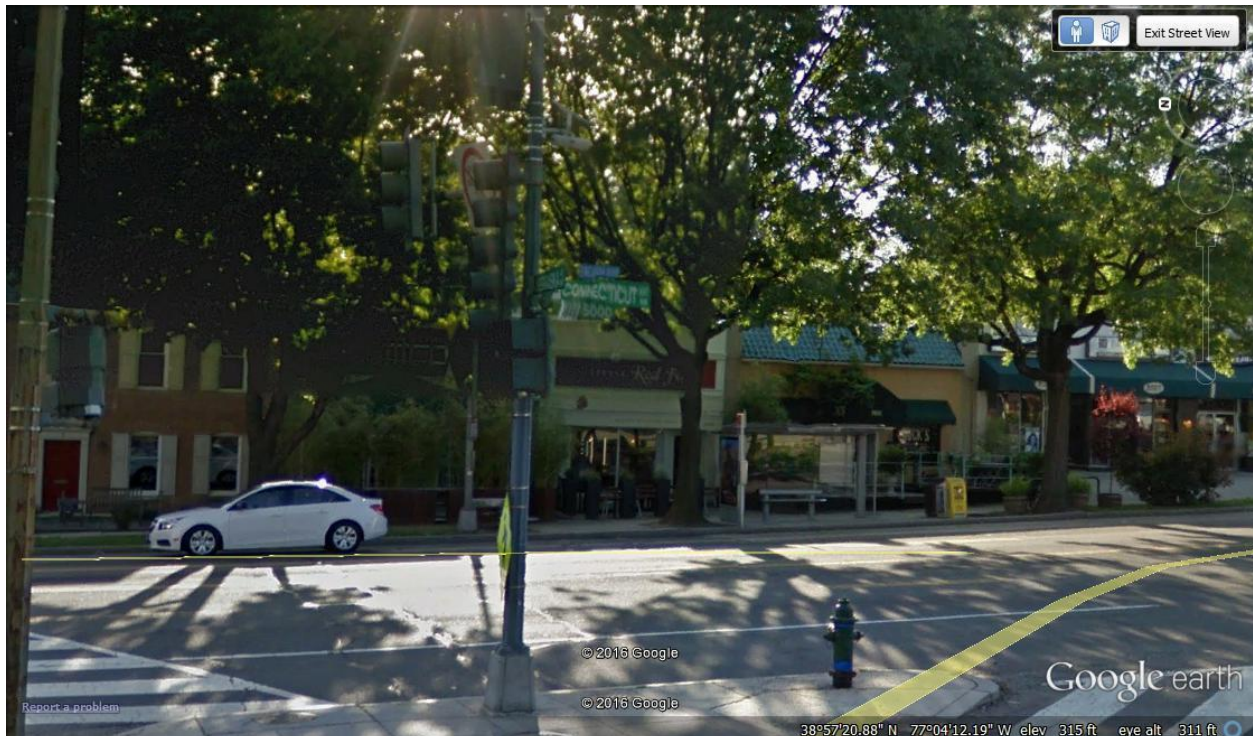

Things to Note:

Gas is now \$3.29

Change in vehicles

Comet Pizza is once again very dark

Things to Note:

Comet pizza is extremely dark, the sign looks as though it has been altered.

Look at the street signs – clearly there has been some alteration and image manipulation – WHY?

For those of you unfamiliar with how Google Earth images typically work, the following images will show what is supposed to transpire when walking the street view.

Then...

Things to note:

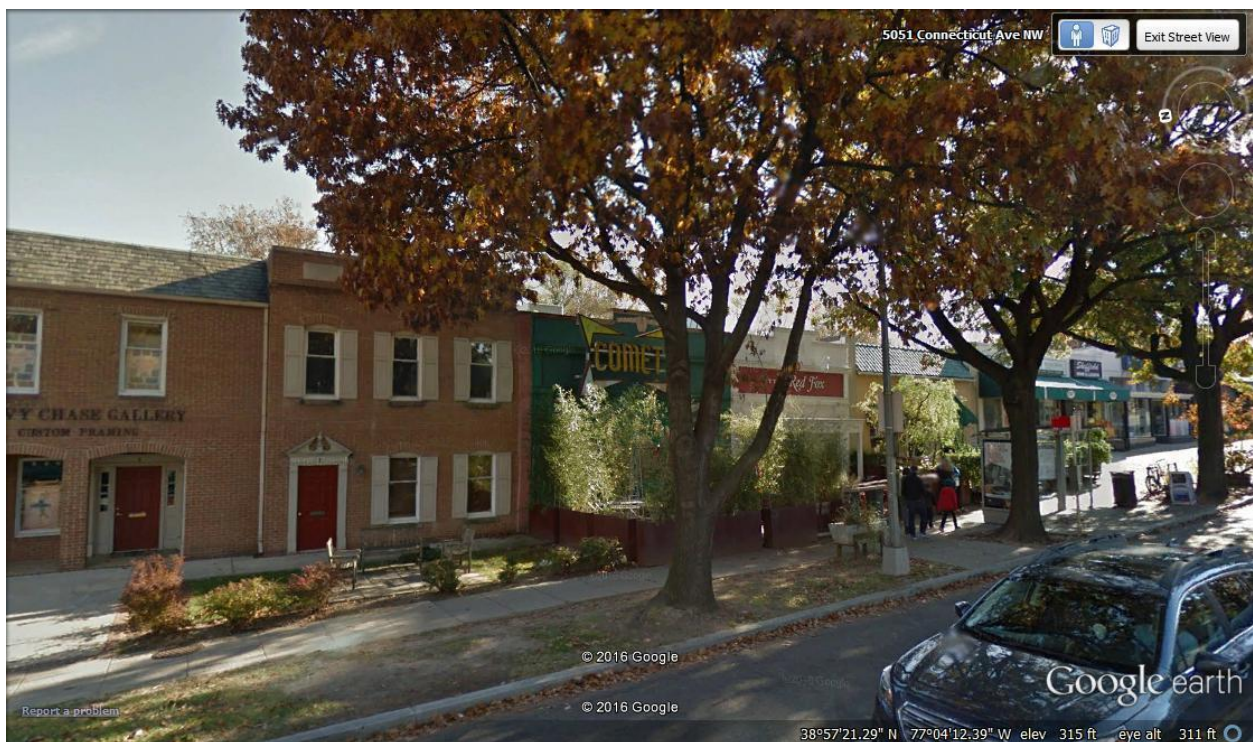

Traffic moves with you in normal time as these images are captured from the infamous Google car.

Vehicles and pedestrians move relative to the Google car just as if you were walking down the road hence “street view”

Let’s look at what happens when you walk down the street with Comet Pizza on the left hand side.

Things to note:
 Comet is dark
 Vehicles, Pedestrians – pay attention.

From here, move one frame forward and look back to the left at Comet...

That whole group of people has disappeared.

As you walk down the road with Comet Pizza on your left hand side people pop out of nowhere and then vanish the next frame. Vehicles also do the same – this is imaging splicing at its worst. WHY? Since when does Google Earth only update one side of the street?

According to the Google Earth Blog: “**Google usually updates imagery twice a month**, typically around the 6th and the 20th of each month”

Source:

http://www.gearthblog.com/blog/archives/2010/10/how_often_does_google_update_the_im.html

The same thing happens to the vehicles at the intersection of Connecticut Ave NW and Fessenden St NW, they magically change and disappear frame to frame.

Frame 1:

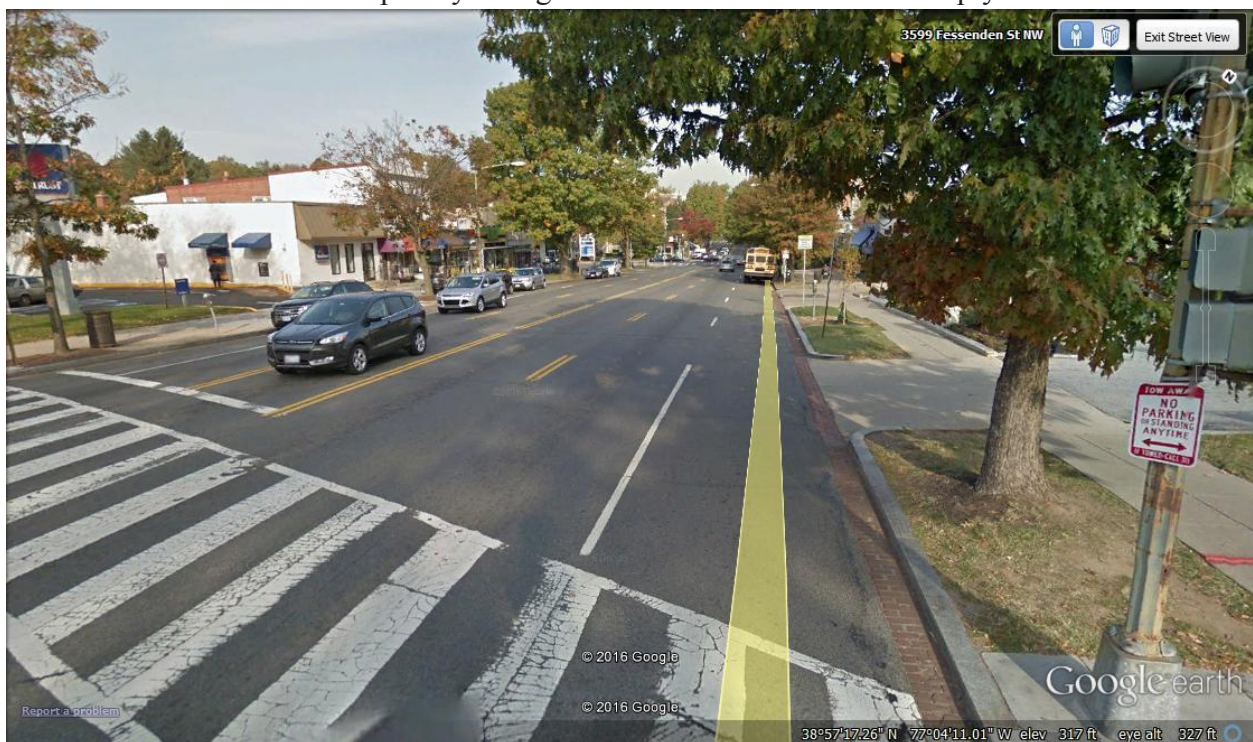

Frame 2

Things to note:

Cars at intersection have completely changed. The other vehicles have simply vanished...

Things to note:

The vehicles did not drive up the street or turn, they are just nonexistent from one frame to the next just as those people vanished.

Well we certainly know that these updates haven't happened around Comet Pizza. In fact, what seems to have happened is a horribly done, terribly thought out splicing of images. If this was not made obvious enough in the previous images the next images solidify this fact for me.....

Things to note:

How dark Comet Pizza is in this picture.....

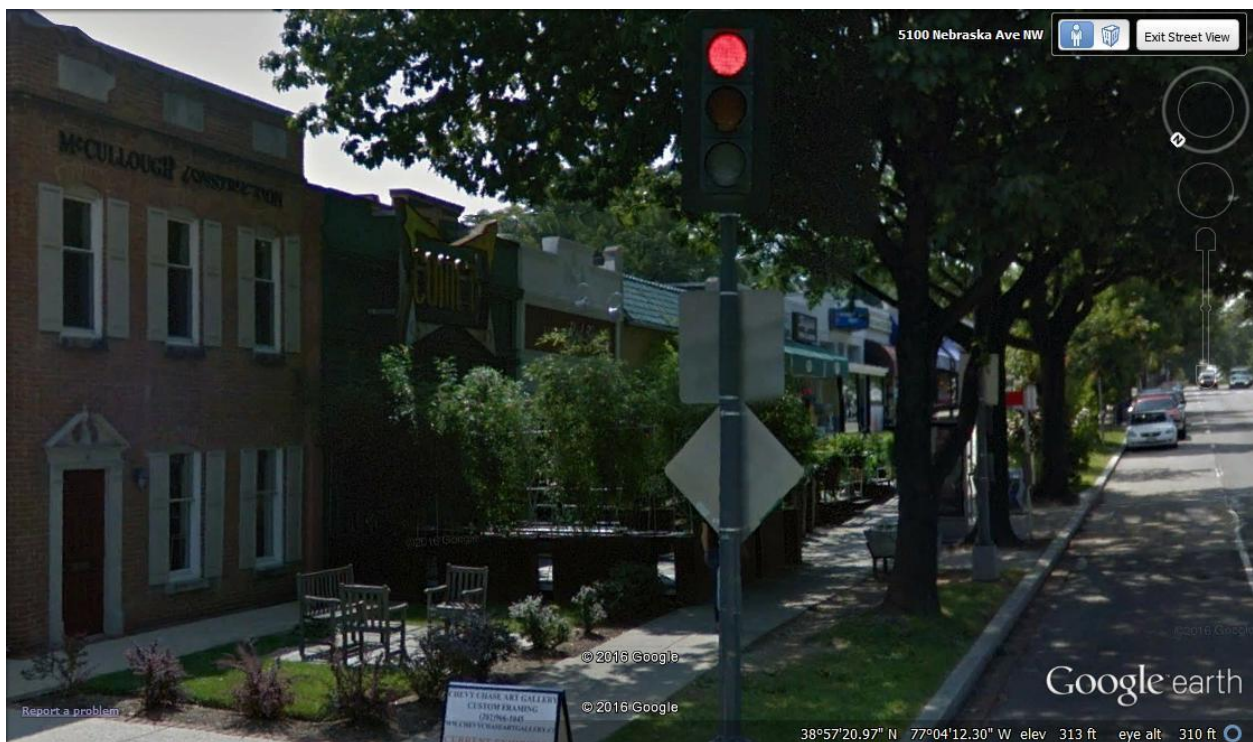

Zoom in on Gallery door the door appears to be warped. Zoom in on the 'Free paper' bin in front of Comet – also looks warped

Things to note:

Comet Pizza has become a unexplainably dark, the sign is looks warped to me

The McCullough Construction sign proves the image has been altered.

Again what I believe is the “free paper” bin is insanely warped. You barely have to zoom in to see this. It is very unlikely to be the same exact glitch in different frames. Every time you move frames on Google Earth the image updates...

There is also a paper/sign tied to a tree near Bucks but I was unable to read what the sign said...
Images for reference

Now why is Google Earth Images splicing images from different years to try and make a cohesive, kosher image around Comet Ping Pong? They have not only spliced together several years worth of images but there has also been clear photo manipulation. If pizzagate is fake news then why all this secrecy and cover up? What happened to the option of looking at historical images??

Things to consider when reviewing these images: Position of cars, people and the sun
