How to Get on the Internet

You will need three things to access the Internet: (1) an ISP, (2) a modem, (3) a Web browser.

1. **The Internet Service Provider (ISP)** - Your access to the Internet is through an Internet service provider (ISP), which can be a large company such as Comcast or MSN, or any of hundreds of smaller ISPs throughout the country.
2. **The Modem** - Depending on the kind of service you have, you will need a unit of hardware called a "modem" for connection. If you sign up for cable or DSL service, which is from 40 to 100 times faster than telephone dial-up, your provider may send you the appropriate modem, or you can purchase it at your local electronics store. Quite simply, opt for the high-speed service if you can.
3. **Browsing the Web** - A Windows PC comes with the Internet Explorer Web browser. The Mac comes with Safari. Chromebbooks come with Chrome. Windows and Mac users quite often choose a different browser such as Firefox (www.mozilla.org) or Chrome (www.google.com/chrome), which offer additional features and less vulnerable to hackers.
4. After that, all you do is launch the browser to "surf the Web."

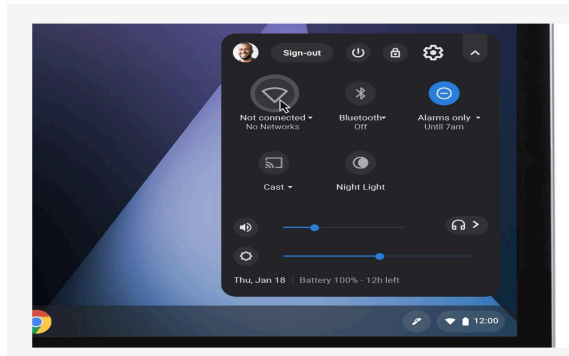

How to Connect to WiFi on a Chromebook

1. Click on the Quick Settings Panel at the bottom right of your screen

2. Click on 'no-network'
