securly://

DOWNLOAD Securly Home Parent Portal app (on iTunes or Google Play)*: With the **Securly Home Parent Portal app**, families can monitor student technology use and customize filters on district devices. Custom filters/rules set through the Securly Home Parent Portal will only apply when a district device is NOT connected to the BV Network/IP Address. If you choose not to set custom rules, devices will continue to be filtered through the district's default settings. This app is currently available to families with students who received a district Chromebook/MacBook as part of the 1:Learner initiative. Securly Home accounts are tied to the email address you have listed in ParentVUE. If you need assistance adding or updating your email in ParentVUE, call the front office of your school.

RECEIVE self-harm notifications: Families who download the **Securly Home Parent Portal app** will automatically be opted-in to receive mobile push notifications if their child searches content related to self-harm on a district-provided device. For resources to help talk to your child about their well-being, visit the district website.

PAUSE access to the internet: With Securly Home, families can temporarily disable/pause access to the internet on their child's district device outside of the BV Network/IP Address.

REVIEW weekly online activity emails: Families will receive weekly email reports from Securly containing a sample of their child's online activity on district-provided Chromebooks/MacBooks as part of the 1:Learner initiative. Those who do not want email updates can opt out by clicking Unsubscribe at the bottom of the Securly email.
