1. Voicing Your Opinion
Ask your students what they think "digital citizenship" is, and have them share their attitudes and values online. This gives them a chance to voice their opinions, and many will give in their understanding of what is right and wrong as they consider their peers' perspectives when controversial topics are verbalized and discussed. Go around the room and let your class hear comments enough to demonstrate what they believe comprises its main principles. Use the conversation as a valuable moment to explore and reinforce the correct attitudes and actions, and take the time to work through those that are inaccurate by discussing why they are not the best thing to do.
