

Full Stack Mobile Engineer at Early Stage Telehealth Opioid Dependence Clinic

[Bicycle Health](#) is a rapidly growing early stage startup that aims to help millions of Americans decrease their opioid use via Medication Assisted Treatment and Opioid Tapering. Since our launch in January 2019, we have served over 500 patients with good early outcomes. Our mission is to improve access to treatment for patients with opioid dependence and provide comprehensive care through telemedicine.

We are looking for an engineer to join our cross functional team and put their talents to work towards building something that matters - directly impacting the way people overcome their dependence to live productive and happy lives. Curious, passionate, and creative problem solvers seeking to learn and contribute in a high-growth environment are welcome to apply.

You can expect to:

- Dive in from day one, building our patient-facing app by leveraging and deepening skills in Typescript, React Native, Redux, CSS, HTML.
- Set and deliver on technical decisions shaping our earliest product iterations.
- Execute on projects with a highly collaborative team, learning from and mentoring peers from a broad array of personal and professional backgrounds.
- Translate beautiful designs into smooth & reliable responsive mobile experiences.
- Continuously improve our patients' experience in cross-functional partnerships with design, medical and behavioral health teams.

You'd be great for this role if you:

- Have spent 5 or more years building, shipping, and maintaining mobile applications.
- Have experience building cross-platform design systems.
- Have experience designing the API layer for mobile applications.
- Are familiar with responsive mobile development in a production environment.
- Love driving simple design and implementation with a focus on end user behavior.
- Demonstrated experience working in an agile environment, taking initiative and shipping products while contributing to collaborative design, engineering, and product teams.
- Have experience working on HIPAA compliant software (preferred).

Benefits:

- A mix of salary and equity in Bicycle Health. We just closed our first round of financing - get in on the ground floor!
- Autonomy over your work to build your team, set the culture and create impact.
- Work with a talented, enthusiastic and mission driven team of passionate individuals.

Location: Anywhere.
