

## Environmental Health Project – 60 point Assessment

Who? You may work individually or in pairs.

What? Research a specific environmental issue or environmental disaster.  
Every group

needs a different issue. Can be natural disasters or man-made disasters.

Issues need to be as specific as possible. “Water pollution” is way too broad.  
What

about it? Oil spills? Micro plastics? Overfishing? A specific disaster that occurred?

Create a flyer, PowerPoint, poster a comic strip, brochure, PSA, ETC that you can share

with the class.

Questions that need to be answered:

What is your Issue? Explain it.

Why is this an environmental problem / why is it harmful to the earth?

When did this issue start? Is it still happening?

Where does this issue occur? (Want as specific locations as possible. USA?  
Other

countries? Idaho? Boise? Etc..)

How does your issue impact humans?

What are some steps you, and/or others could take to try and help or prevent this

problem?

One more fact of your choice about the problem.

DUE: Presentations will be FRIDAY

Other remarks:

Clearly identify who did what in your project.

Presentations will be done in front of the class. If not, you must find time to come show

me. Will go in as missing until you do!

Points Breakdown

5 Points per “question” that needs to be answered = 35 points

10 points for citing all your sources.

15 points for effort – pictures, visibly appealing, organized, etc.
