3. All the paragraphs in this story about James Watt are jumbled up. Rearrange them into the correct order and read about this famous British scientist.

James Watt (1736 — 1819)

- A. James Watt also made some other inventions. One of them is a copying machine which was the predecessor of the typewriter. His other invention is a rotative engine that could run machines and became the basis of industry.
- B. At eighteen James decided to become a professional instrument-maker and moved to his uncle's place in Glasgow. Then he continued his studies in London and returned to Glasgow as a skilled instrument-maker.
- C. He liked mathematics and was fond of designing and making things. When he at last was able to attend school, he became one of the best pupils in mathematics and languages.
- D. James Watt retired at the age of 64, but he never stopped working in his workshop inventing new things. When he died in 1819, a monument to his memory was erected in Westminster Abbey.

- E. One day James Watt was asked to repair a small working model of an atmospheric-steam engine that was used for demonstration at the university lectures. He not only did that but also improved the model and made one of his greatest discoveries — a steam engine.
- F. His passion for engineering was born when the boy read Isaac Newton's "Elements of Natural Philosophy". His first engineering creation was a small electric machine with which he gave his friends shocks that made them jump.
- G. James Watt was born in 1736 in Scotland in the family of a shipbuilder. The boy was not strong and suffered from terrible headaches, so he couldn't go to school and his parents taught him at home. The boy had a very good memory and a natural love of work.
- H. When Glasgow University needed a qualified specialist to install new instruments in a new observatory, James Watt was invited and did that job brilliantly.
