Proposal Overview

Proposal ID/Reference: #25
Proposal Title: Nomadex AMM - WebDev.algo - 20240221
Proposal Submission Date: 21st February, 2024
Proposal Executor: WebDev
Proposal Summary: The proposal requests a reward for work already completed on the Nomadex AMM, as well as future work including but not limited to an arbitrage bot and improved UI for limit orders.

Completion Criteria & Verification

Objective/Milestone Assessment

Complete for each objective or milestone:

Milestone 1: Current implementation of AMM smart contract and web interface.
Status: Completed
Evidence/Proof: I have confirmed the code is available. I can not certify that it is free of bugs, issues, or there in its entirety due to my lack of development background. Secondly, I have gone through the website and done swaps & pools, and for “current” implementation, it still is available.

Milestone 2: Current Implementation of limit orders.
Status: Completed
Evidence/Proof: I have confirmed the code is available. I can not certify that it is free of bugs, issues, or there in its entirety due to my lack of development background. Secondly, I have gone through the website and attempted a limit order. While poor UX/UI It did appear to function.

Verification Summary

Definition of “current implementation” would classify it completely by that. The main scope of these deliverables of Milestone 1& 2 were around open sourcing, which as detailed above appeared to be there. Further Milestones have NOT yet been completed, and should not be paid out.

Verifier's Comments & Notes

While not the proposers fault, the milestones were not detailed enough and the council should have requested additional information during the Due Diligence stage. Due to the conflict of interest I had abstained from this vote, but stepping in for milestone verification process was a bit difficult since the only real substance was that something was open source. Current implementation was not defined.

Verifier Details & Sign Off

Verifier's Name: Andrew Kotulak
Verifier's Position/Role: Director
Date of Verification: 03/29/2024

Signature: 

Attachments & Supporting Documents

List and attach any additional documents, links, images, or evidence that was used during the verification process or that supports the sign-off.
