

- The two most popular fruits that people like to eat today
- Both start as flowers on trees before becoming the fruit that we eat
- Both are filled with seeds that are used to create more of these trees after being buried
 - These seeds contain very small traces of cyanide
- Both can be consumed in a variety of ways
 - Both can be eaten as slices
 - Both can be drank as juice
 - These juices have an association with alcohol (Apple cide is often alcoholic and Orange juice is often mixed with vodka)
 - These contrast because the apple cider itself is alcoholic while the orange juice requires outside aid to become alcoholic
 - These juices are often served with pulp
 - They contrast in the way that apple cider gets its own name, while orange juice with pulp doesn't
 - Both are found in fruit cups
 - Both can be eaten as a smooth jelly like substance (Apple sauce and Marmalade)
 - They contrast in the way that apple sauce is typically eaten alone while marmalade is typically used as a spread
- After being eaten you are left with an inedible part of the fruit (the apple core and the orange peel)
 - They contrast in the fact that the apple core is in the center and the orange peel is on the outside
- Both belong to a specific group of fruits that they share many similarities with (Pome and Citrus)
 - They have a hybrid that was created by crossing themselves with another member of they groups (The papple is cross between an apple and pear and tangelo is a cross between an orange and grapefruit)
- Both have a variation that changes the color that the fruits are typically associated with (Green apples and Raspberry oranges)
 - These variations also affect the flavor of the fruit
 - The variations contrast in the fact that apples change on the outside, and oranges change on the inside
- Both are incredibly healthy
 - Both are able to keep certain unwanted things away due to how healthy they are (Apples keep doctors away and oranges prevent scurvy)
- Both have a dry exterior and a juicy interior
 - They contrast in the way that apples are far more solid inside while oranges are almost pouches of juice
- Both fruits have hundreds of variations
- Apples to oranges

Worst apple matchup my ass
