

Build Slideshow App Part I

Goal: Build a slideshow app that allows the user to scroll through pictures

- ❑ Next button changes the picture shown

Resources

- Slideshow template:
goo.gl/NwYzqY

Choose a Challenge Level!

Mild

Program the app using this video tutorial: goo.gl/eCfRK2

Medium

Use the [user interface and algorithm reference](#) to guide your programming.

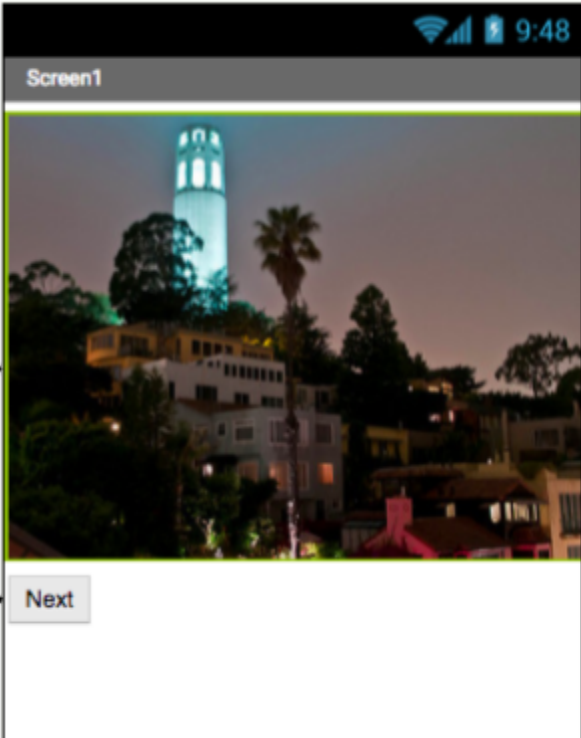

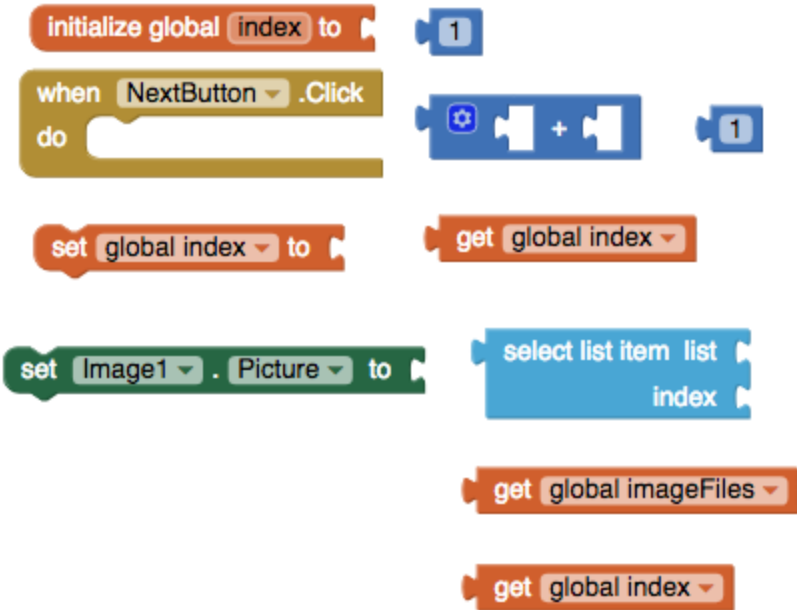

Spicy

Build the app using only the template and description above.

Finished Early?

Continue with [Slideshow App Part II](#)

Medium Level Guidance

User Interface	Blocks to Use
1 Add an image component. Set the picture to Coit Tower 2 Add a Button. Change the text to "Next" 	 <pre> initialize global index to 1 when NextButton .Click do set global index to get global index set Image1 . Picture to select list item list index get global imageFiles get global index </pre>

Algorithm	
Event	Response
When Screen1 Initializes	the image component should show the 1st item on the list
When the Next Button is clicked	the image component should show the next item on the list
