

ST512 Statistical Methods for Researchers II Course Outline

COURSE INFORMATION

Course Website: wolfware.ncsu.edu

Course Credit Hours: 3

Course Description: This course is intended to give students a background in the methods of statistical analysis that will assist them in analysis of data generated from research situations in the sciences and social sciences. Concentration in this course will be on realistic examples and the problems that arise in them.

Prerequisites/Corequisites: ST 511 or ST 513 or ST 517. Students are expected to be familiar with the basics of statistical inference, including point estimation, confidence intervals, and hypothesis testing. Although we will review these ideas briefly in class, the expectation is that this review is a refresher, not a first exposure. Students wishing to brush up on their elementary statistics may consult the excellent on-line (and free) textbook at https://www.openintro.org/book/os/

COURSE DELIVERY AND STRUCTURE

This online course delivers all learning materials, activities and assignments through **Moodle**, a secure and easy-to-use online learning platform. Moodle is a web-based tool (often referred to as a learning management system or LMS) used for web-enhanced and online courses. Instructors use Moodle to facilitate class communication, provide course materials and deliver assignments and other assessments.

Students and instructors use a web browser to access their courses, and no other special hardware or software is required. Courses are provided in a password-protected environment, ensuring student privacy within the class. Students with a UnityID (issued by the University) Click here to learn more about Moodle through a quick training module.

The course is asynchronous; students have no real-time class meeting requirements.

Learning materials and activities include:

- Guided note outlines: Contain key text and graphics for each topic; some topics
 may be broken into multiple note outlines. Definitions and examples will be filled in
 by students with the help of the online lectures. These outlines are a student's major
 resource in completing the weekly assignments and semester exams.
- Online lecture videos: These narrated presentations take the place of face-to-face lecture. Students will use the content in these videos to complete the guided note outlines. These videos are intentionally kept short, so there will be multiple videos for each outline.
- Weekly assignments: Administered through the Moodle in the form of quizzes or homework.
- Quizzes/exams. Information will be provided by your instructor
- **Discussion forums:** Required weekly discussion postings, which help students apply course content while building community.

COURSE LEARNING OUTCOMES

Upon completion of this course, students will be able to:

- 1. Analyze and interpret one-sample and two-sample means and proportions data
- 2. Analyze and interpret correlation, linear regression, and multiple linear regression data
- 3. Compute and use partial and sequential sum of squares, and expected mean squares
- 4. Use ANOVA methods including contrasts and multiple comparisons
- 5. Make sample size computations
- 6. Design blocked and factorial experiments
- 7. Analyze mixed models including split plot experiments.

COURSE TOPICS AND SCHEDULE

Topic List and Schedule

- Analysis of Variance (ANOVA)
- Simple linear regression and least squares confidence
- Prediction intervals
- Correlation
- Multiple regression
- Logistic regression
- Factor analysis
- Randomized complete block design A
- Analysis of covariance (ANCOVA)
- Random effects
- Nested factors
- Split plot designs

Please note: the course schedule is subject to change.

COURSE MATERIALS

Required Materials

- Guided Note Outlines: No cost. There is no required textbook for the course; the note
 outlines are the main resource to help students learn course content. Outlines should be
 printed and completed by the student based on content in the online lecture videos.
 Completed outlines are the best resource to prepare for discussion posts, quizzes, and
 exams.
- SAS Statistical Software: *No cost.* Students will be exposed to the statistical software SAS, which is widely used in analysis of research data. SOME STATISTICAL SOFTWARE SUCH AS SAS, R, OR PYTHON To access SAS:
 - Students may use SAS in the <u>Virtual Computing Laboratory</u> (VCL). Machines in the VCL are assigned on a reservation basis and may fill up; students should plan accordingly to ensure assignments are completed on time. There is no cost for using the VCL. For more information, note the link "How Do I Get Started" under the "Help

- & Documentation" menu of the main VCL page. Questions about the VCL should be addressed to the NCSU Help Desk.
- Students may request access to the web-based SAS Studio; click this link and follow the instructions for independent learners.
- o Students may install the software on their own machine for free.
 - For information on obtaining SAS for your own machine see software.ncsu.edu/campus/sas/
 - Note that you must install both the software and a license file; for help with either of these, please contact the NCSU Help Desk.
- Students who are near campus can use SAS at a variety of campus laboratories.
- **Basic calculator:** Cost varies but should be minimal. Should have square and square root functions in addition to basic addition, subtraction, multiplication, and division.

Optional Materials

- **Textbook:** An Introduction to Statistical Methods and Data Analysis by R. Lyman Ott and Michael T. Longnecker. Cengage. (ISBN 978-1-305-26947-7). 7th edition. List price for hardcover version is approximately \$200 new but currently on Amazon for \$140. An ebook edition is available online for approximately \$80 (prices are subject to change)
 - The textbook is a good source of additional examples and practice problems. No homework problems will be assigned from the textbook.
 - Select chapters from the book are available for a 3-hour digital rental from the library: https://cdla.lib.ncsu.edu/books/5765
 - If you need to read additional chapters, you may request scan pages of the chapters from the library using the above link
 - An ebook is available through the university bookstore or the publisher's website: https://www.cengage.com/c/an-introduction-to-statistical-methods-and-data-analysis-7e-ott/9781305269477PF/

Grading Scale: This course uses the standard NCSU letter grading scale. Percentage cutoffs are firm, and no rounding occurs; for example, a percentage of 86.99 would correspond to a B.

Low(percentage)	Letter
97 ≤	A+
93 ≤	A
90 ≤	A-
87 ≤	B+
83 ≤	В
80 ≤	B-

77 ≤	C+
73 ≤	С
70 ≤	C-
67 ≤	D+
63 ≤	D
60 ≤	D-
0 ≤	F

Exam and Testing Instructions

All exams are closed book (subject change per instructor preferences). Calculators may not be used on exams. The midterm exams are limited to 1.5 hours. The final exam is limited to 2.5 hours.

Exam proctoring: Your instructor <u>may</u> require proctored exams facilitated through <u>DELTA</u>
<u>Testing Services</u>. A proctor is an impartial third-party who verifies the identity of the student and ensures the academic integrity of an exam.

- Local students DELTA Testing Services will offer the exam(s) for this course on campus. Please visit the DELTA Testing Services website for <u>more information about</u> <u>on-campus testing</u>.
 - Step 1: Make an Appointment. Exams at the DELTA Test Centers are by appointment only. To schedule your appointment, visit go.ncsu.edu/takemytest.
 Appointments must be made at least 24 hours in advance; however, the sooner the better.

• Step 2: Come Prepared

- o Bring a photo ID
- o Know your UnityID
- o If you are a DUO user, bring your registered device.
- o Arriving late for an appointment may result in the appointment cancellation; students can sign in for an appointment up to 15 minutes early.
- 2. **Students with Accommodations** If you have approved accommodations with NC State's Disability Resources Office (DRO), DELTA Testing Services wants to ensure that you receive the appropriate accommodations when you go to the test center.

- Email Testing Services. Send a PDF copy of your Accommodation Letter to <u>delta_accommodations@ncsu.edu</u>. Once we have received a copy of your accommodation letter, a confirmation email will be sent informing you that your accommodations have been processed. You will *then* be able to schedule an appointment.
- Remote students DELTA Testing Services will oversee the process of approving a remote proctor, sending all exam materials, and receiving any materials from your proctor (https://testing-services.delta.ncsu.edu/testing-services-remote/off-campus-su-bmit-request/)
 - Step 1: Submit a Request. To use a remote proctor for an exam, you must submit
 an online request and it must be approved by DELTA Testing Services. The request
 should be submitted at the start of the semester. The approval process takes at
 least 72 hours.
 - Pre-approved proctors are marked on the map and are selectable in a drop-down menu in the request form.
 - If you do not see a pre-approved option in your area, it is your responsibility to find a proctor who meets the guidelines. When submitting a request, if your proctor is not pre-approved, select "other" and fill in the remote proctor's information. (Please double-check the email address.)

Please note that the instructor does not communicate directly with proctors. Please refer all questions regarding proctoring to the distance proctoring center via deproctor@ncsu.edu or call 919.513.1513.

This document is an example of course information that will be modified per instructor's preference.
