Celo Governance Call #30

May 30th, 2023

CGP XX: Emerging Artist Growth Fund (Link)

- Summary: This proposal will provide funds for artist communities that are aligned with the Celo mission. The goal is to encourage people in the artists' communities to join the Celo ecosystem.
- Discussion Points:
    - Size of the fund & milestones: $300K.
        - 1st milestone is onboarding 5 new artists (10K followers, previous sales, engage 100 users).
        - 2nd milestone is organizing events for artists.
    - Impact on the ecosystem: This proposal will bring 3 foundations into Celo ecosystem (each one has 50K+ followers), and it will specifically get people to use the Valora wallet.
        - As an example, the ArborDay Foundation will give a Celo-based NFT to people who plant trees.
    - 1 week until submitting on chain

CGP XX: Celo Europe DAO (Link)

- Summary: Use funding to promote growth through hackathons, onboarding new developers, etc. in Europe, similar to other regional DAOs. They believe they can reach areas that are hard for the Celo foundation to reach. They may also supplement existing events—essentially as an extension of Celo ecosystem in Europe, and they will plan events around larger crypto events/conferences.
- Discussion Points:
    - How will this impact on-chain activity? They will aim to reach 1,500 participants and ultimately onboard 750 people. They plan to measure results through a Celo Europe landing page.
    - Through about November, they plan to have 1,500 attendees, produce 10 Celo camp participants, and 5K individual Celo Europe website visitors.
        - Then, they'll likely seek follow-on funding.

CGP XX: Common Stack (No Link)

- Summary: Will establish Common Stack in Celo ecosystem. They will also implement AragonDAO for Celo, a common way to implement DAOs. This is for people who want to raise money as a group together. They will do 3 main things:
    - Implement AragonDAO
    - Create an incubator program to make it easier to fundraise.
    - Make it easier for people to launch an augmented bonding curve.
- Discussion Points:
    - What version of Aragon? Old, Commons Stack would handle it.
