

# WOL Setup Tutorial

Zidoo RTD1619DR models support WOL (Wake on LAN), which can turn on/off Zidoo media player remotely via cell phone. Now this guidance take Z9X for example and show how it works.

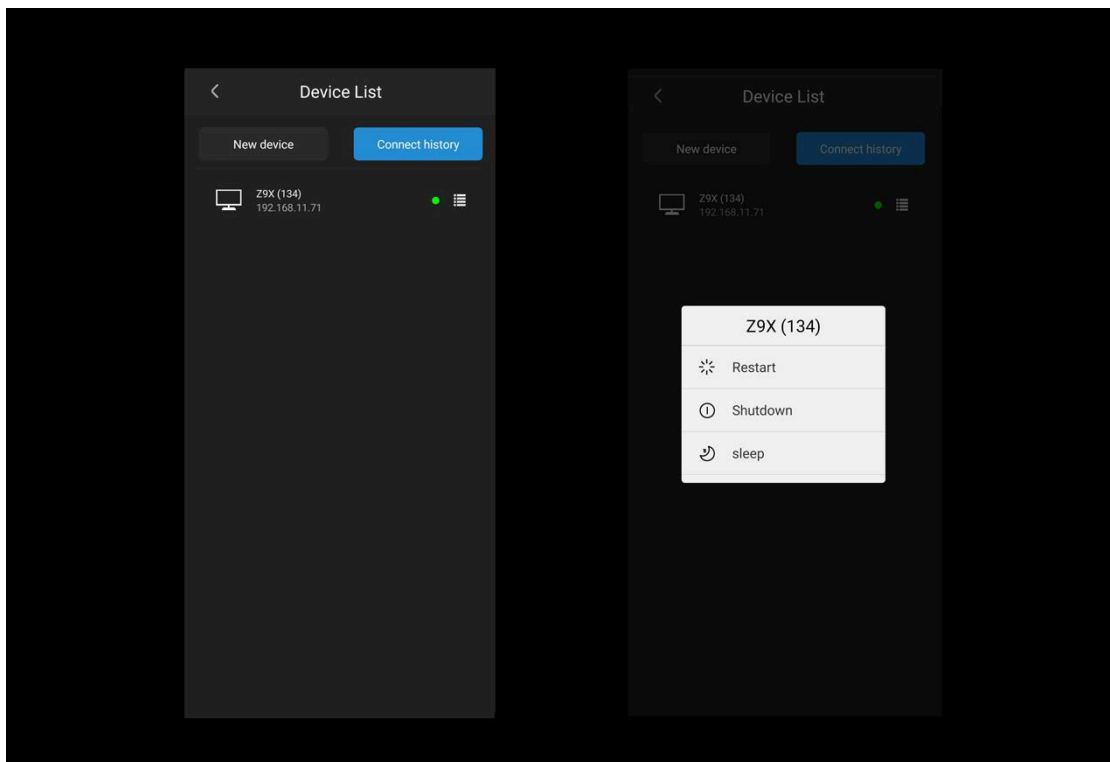

**1. Install Zidoo Controller APP on cell phone, it will automatically search media player in same LAN, click the media player that you want to access.**

**2.Choose “accept” on Zidoo media player to finish Authorization.**

**3.When the media player is standby, find “connect history” on Zidoo Z9X to restart, shutdown or sleep, like the picture shows below.**

**THE END**
