

Emails, Robbie Searcy, ERCOT Communications manager,
December 15, 2015

Hello,

Thanks for getting back to me! My main question is about a particular figure. I'm fact checking a congressman's claim that ERCOT says the CPP will cause Texas energy costs to rise 16% each year. I tried to find that specific statistic in ERCOT reports and found [this analysis](#) saying costs could increase by up to 16% by 2030, without accounting for some additional costs (last paragraph on p 1). I am wondering if the stronger, 16% per year projected increase is mentioned in that or any other ERCOT reports or statements. Let me know if my question needs any clarification. Thanks again for your time!

Best,
Filipa Ioannou

Filipa,

I am happy to discuss, but would you mind letting me know your specific questions so I can ensure I have the appropriate information? Thanks!

Robbie Searcy

Dear Ms. Searcy,

I just left a message on your office phone, but just wanted to get in touch via email as well-- I'm a reporter at the San Antonio Express-News seeking some clarification on ERCOT's projections regarding energy cost increases caused by the EPA's Clean Power Plan. If you could let me know who might be best to get in touch with to discuss I'd really appreciate it. If you need to reach me by phone the cell number below is best. Thanks so much.

Best,
Filipa Ioannou
