INFORMATIONAL DOCUMENT 2348: FLOWERING

Not much is currently known about Flowering due to the evasive nature and hostile behavior of those few that practice it. What little information we have gleaned from willing and forced individuals has been widely incomprehensible.

Flowering is most recognizable by its physical effects, quite obvious by the name. In most cases, a chosen herb, flower, plant or tree is integrated into the host victim being Flowered. This chosen ingredient in the host victim's transformation then is claimed to intermingle with their genetic information, granting them qualities that the plant had in its former existence.

However, this genetic mixing is not observed to occur between the entirety of merged plant and flesh matter. Victims subjected to the process of Flowering observed by Dawnline Labs have been known to contain both dead and living unmerged plant matter of their chosen ingredient within their forms.

The mental effects of Flowering are unknown. It is assumed that the ingredient reaches the brain, however, it is yet unknown how this intrusion causes major impacts on one's psyche. Host victims of Flowering are clearly sentient, and some have even been observed displaying sapience. However, no studies have yet been conducted to investigate further.

The methods used to obtain a Flowered state are also unclear and extensively hidden. Organizations known to practice Flowering, namely both branches of the Church of Wisteria, are highly secretive regarding these matters. Attempts to establish friendly communication in order to learn more for the sake of science has resulted in massacres.

In most cases, the plant matter in Flowered material does not extensively exceed the space of its host.

It is assumed that those few cases where it is are linked to factors such as body development and genetic differences.

No further information is available at this time. Team 5-Epsilon of Dawnbreak Labs is currently at the front of research on this field and will update with new discoveries regarding Flowering as they are unveiled.

May Irene watch over you.

Signed,

Dr. Amelia Lilifell, Ph. D.
