Auto Strafe

Relatively straightforward auto-strafe SA:

This is biased towards the right, if you want it to be equal just change the duration of the wait commands to be equal (or adjust as you wish),

If you want this to run every time you 'fire', just add the button bound to attack (A in my case) to the start of the SA and set the activation key to the one you use to shoot (left mouse in my case).

Shield Swap

Automatically open the death box and swap shields in less than one second. Ensure your cursor speed is set to the highest value and you do not use the cursor input after activating the script as it will interfere with the smart action. This will also only work on deathboxes that are full.
