

Outline for Contributor's Guide

Ned Batchelder and others

After thinking about how to create a documentation contribution guide from the devguide, I think it makes more sense to have one Contributor's Guide with explicit sections for code and docs.

Here is a quick outline of how it could be structured. "(from devguide)" means to use that section from the current devguide verbatim.

- Introduction
 - About this guide
 - Types of contribution
 - Helping with the Contributors' Guide
- The CPython project
 - Structure
 - CoC
 - Standard for communication
 - Enforcement details
 - Roles
 - Core developers (from devguide)
 - (SC?) (EB?)
 - Triager
 - Contributors, role of each contributors
 - Other WG? Typing council? C-API WG?
 - GitHub
 - Repos
 - Issue triaging
 - (How exactly? Guidelines? Is it just about applying labels?)
 - Easy issues
 - (should triagers assign reviewers?)
 - (should triagers close issues?)
 - Writing PRs
 - Etiquette?
 - See also: <https://github.com/python/devguide/issues/1389>
 - (Reviewing)
 - How? Etiquette?
 - How to request a review?
 - Where to get help
- Getting started
 - Basic setup

- Git bootcamp (simplified for everyone to use)
- Code contributions
 - Code setup and building (more complex stuff, delta from basic setup above)
 - More git bootcamp (patches, etc)
 - Lifecycle of a code pull request
 - Development workflow (from devguide)
 - Testing and buildbots (from devguide)
 - Development tools (from devguide)
 - CPython's internals (from devguide)
 - Code style guide
- Documentation contributions
 - Lifecycle of a docs pull request
 - (pull in Documentation sections from devguide)
 - Rst/Sphinx bootcamp
 - Editorial Style Guide
- Translation
 - Need details
