I found the following ad in the recent magazine UFO, (Volume 6, Number 5):

-+-----

ATTENTION UFO ABDUCTION RESEARCHERS: In January of 1991, a limited series of experiments was conducted which demonstrated two new, potentially important discoveries relating to UFO abductions and abduction implants: 1. Abduction implants are responsive to high gauss fields from a permanent magnet. 2. The function of implant devices may be disrupted and neutralized by the application of broad band electromagnetic radiation from a Tesla Coil. We are a small group of amateur researchers who would like to interest ufology in our findings. Replies sought from serious abduction researchers only (replies will be screened). For more information, CONTACT: Nicholas Reiter, P.O. Box 95, Helena, OH 43435.

Does anyone know anything more about this research or about this group?
Thanks, take care.
John.
