

A Nano Carbon Node, being ion buffer dissolved.

AND ...FYI...EVERYONE...AFTER TEACHING TONY ABOUT THE NANO WHEN HE THOUGHT IT WAS LYME...AND WAS TREATING IT WITH 60V JOLTS OF ELECTRICITY IN A BATH TUB...HE WENT IN A TOTALLY DIFFERENT DIRECTION TO WHAT I WAS DOING...IS TOTALLY DIFFERENT AND NOT ALL ALL RELATED TO MY FORMULAS AND DETOX FINDS...METHODS...OR UNDERSTANDING...HE IS ON A TOTALLY DIFFERENT TRACK...APPROACH...AND TOTALLY DIFFERENT RESULTS...AND DOES NOT SEE THE SAME SIGNS, INDICATORS OR CONSTRUCT AND MORPHOLOGY PROCESSES. HE ALSO HAS LITTLE UNDERSTANDING OF QUANTUM PHYSIC...MY REALM AND DEEP STUDIES, FOR MANY YRS.

A blended formula of alkaline buffers and salts for use a a mild cleanser. Adjusted Package Size and Price for will be posted on the Patreon Site products and sign up posts.

Effective Use Instructions:

After getting in the tub and soaking a few minutes in the hot water, stand up, dip moistened fingertips. (not dripping wet,

because the powder will cake, keep a separate dipping dish apart from the formula bag,)

On wet hair add powder and a little water and smooth over the scalp and let soak in, while in the tub. Rinse Stand in tub...3 containers of clean water is your final bath rinse, with clean tap water before getting out ... and before applying a second coat of the ion formula all over the body ... ear flaps and body cavities, etc. The anal area is thickly coated with bio build ups. FYI...this shrinkage causes the hammer-oids.

After standing in the bath and coating the body ... get in tub and soak while scrapping entire body with finger nails ... being aware of the finger tip sensations and scraping out the bio film from the opening folds. Your fingers will become your unbanding 'eye' when closing your eyes and focusing on them. You will develop mental images of the area.

After much scraping and near the end of bath time...use a stiff brush to remove the residual broken down bio film, by vigorously scrubbing all areas.

Stand again and rinse the head with 3 rinses of clean tap water, and scrub the scalp at the same time with your finger nails, and letting the water flow over the body, removing loose residue.

Dip finger in ion powder and lightly coat the body while still damp.

Do Not Towel Dry the skin...hair is O.K. to dry.

Now, after the recoat with the powder, cover all skin areas with a coating of the Bio Film Oil Blend, and start massaging in.

The oil will be absorbed by the plasticized bio film and soften it as it soaks in. The blend will leave a barrier film on the skin to hold in the ions and moisture. The ions create bicarbonate gas as it dissolves the carbon, and lift the nano tech from the now opening tissue folds.

This action can be reactivated after 24 hrs by using wet fingers to rub the skin or applying another coating of the Bio Film Cutting ... Oil Blend... or oil of your choice...grocery store bought extra virgin olive oil, thicker, or Sunflower oil, as a thinning oil, will work just fine, and in lieu of another bath, while allowing the reactivated formula deeper penetration, before needing another bath.

Set up your FIR mat in a place where you can be on it most of the time awake and during sleep. This is to add ions for total body saturation.

Place your Ion generator in your most used room with your fir mat ... and when using your fingers to scrape off the bio film and opening the tissue fold bandings...close your 'seeing eyes' and start focusing on the feelings and sensations and mentally 'see' the fold patterns and learn to follow them for easier release and tie node lock up locations of hard polymer tie nodes.

I AM ZEROING IN ON THE VAST AMOUNT OF BIO FILM RUB OFFS AND TISSUE FOLDS OPENING ENDLESSLY

AND HAVE DISCERNED THAT WHEN WORKING THE TISSUE...THE SET HYDROGELS SPLIT OPEN THRU THE LAYERS...AND THAT ALLOWS THE HYDRO GELS UNDERNEATH...STILL PRODUCED BY THE GLANDS...TO OOZE THRU THE CRACKS IN THE LAYERS...AND THEN START TO SOLIDIFY AND AIR DRY...AND THAT IS WHY THE LAYERS GET SO SOFT AND PLIABLE AT TIMES....AND THEN START TO DRY....NEEDING THE REHYDRATION BATHS MORE FREQ AND THE OILINGS TO KEEP THE FRESH HYDROGELS FROM DRYING AND SHEDDING THE 100 X;S WEIGHT IN WATER.

WHEN THAT HAPPENS THE FOLD START CLOSING AND DRYING UP AGAIN....AND THAT CAN BE THRU ALL THE LAYERINGS ...FLOWING RIGHT TO THE OUTER COATINGS.
