

Chocolate Spread

Beth and Abhay share two pieces of toast with chocolate spread. They do this fairly.

Find three ways they could do this.

Make it easier	This problem	Make it harder	Make it much more challenging
What if there was 1 piece? Can you show me how you would cut it up using this toast?	Can you describe how you will share them? Can you explain your thinking to someone else? Can you convince them that you are right? Can you justify your answer? Can you prove your answer is correct?	Find more than 3 ways to do this. What if there were 4 pieces of toast? How about 6 pieces of toast? What if there were 8 pieces of toast? How about 100 pieces of toast?	How about 5 pieces of toast? What patterns do you notice? Can you write down your ideas using a table or chart?
