## ABOUT ME

A graduate from the nation's fourth best public university and a certified software engineer. Passionate learner and team player with foundational full-stack skills. Well-equipped for teamwork with experience in an Agile team and hectic restaurant environments as a customer service expert.

## EXPERIENCE

### Software Engineer Trainee, Online — *Certification*

Oct 2023 - Sep 2024

Implemented both front-end and back-end projects using React, Node, Express, Bootstrap, and PSQL. Applied a test-driven development approach while utilizing tools like Jest, Jasmine, and React's testing-library.

### Customer Service Representative, Ikea — *Sweetwater*

Jun 2023 - Nov 2023

Represented Ikea as a professional customer facing employee. Collaborated with all branches of the company in an organized manner despite working during customer-dense hours.

## PROJECTS

### Total Paralegal Services

A personal website made for a local paralegal complete with reactive elements and animations. Used Figma to create drafts for the website until the client was satisfied and then built and deployed it using Next.js and Netlify respectively.

### Spam Detection

Machine learning research project built in python for a Natural Language Processing course. Testing the difference between two machine learning models on detecting spam/ham emails.

## EDUCATION

**Bachelor of Computer Science**

**Florida International University**

Jul 2020 - Apr 2024

## SKILLS

**HTML/CSS**

**Javascript**

**Node.js**

**React.js**

**Next.js**

**Angular**

**WordPress**

**Figma**

**Express**

**Python**

**Flask**

**PostgreSQL**

**Unix**

**APIs**

## Pokemon Team Builder

Full-stack project built on Flask, PostgreSQL, and PokeAPI that allows users to search and add Pokemon to teams on their profile. Functional search bar with autofill suggestions and user authentication. Front-end uses Bootstrap and backend models and routes uses Flask.

## Fortnite Shop Compendium

Full-stack project using React and Express that shows users the daily shop Items from the video game "Fortnite" without needing to login to the game.

## Jobly

Website that allows users to find and apply to jobs from various companies. Includes user account creation and authentication. Full stack project built with React, PostgreSQL, Flask, and Node.
