About getting the data in single table I think it depends on data format how API will sends and let me explain about the another report issue that I am designing and:

I have this API:

http://localhost:..../api/Participant/XYZ

If I don't pass the the encClientId (encryptedClientId) in the query string then it will give me the data for all the encClientId

and If I pass the enClientId like this then it will give me the data for that provided encClientId

http://localhost:...../api/Participant/XYZ?encClientId=_EICc8mvaz_f62OpbNP1pw==

and also this API also handles for multiple encClientId as well like this:

http://localhost:...../api/Participant/XYZ?encClientId=_EICc8mvaz_f62OpbNP1pw==,34sTwA6hW_3DJINx fUa9kA==

And suppose I am creating a cross table using this API with the filter as encClientId

Set up::

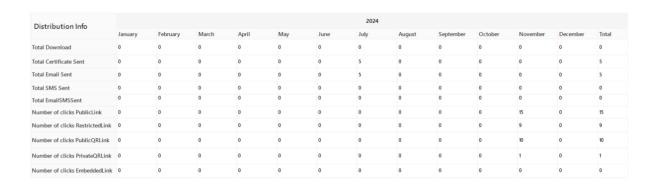

- -- Report parameter EncClientId MultiValue -- True
- -- Main Report API above API added filters: = Fields.encClientId In = Parameters.encClientId.Value
- -- Added a group where grouping: Fields.encClientID

And Filters in Group: = Fields.encClientId In = Parameters.encClientId.Value

When I select EICc8mvaz f62OpbNP1pw==

This is the cross table for the EncClientId = _EICc8mvaz_f62OpbNP1pw==

When I select two EncClientId

_EICc8mvaz_f62OpbNP1pw==, 34sTwA6hW_3DJINxfUa9kA==

It is giving me two table okay but I am getting data of 1st EncClientId in both table and if I put other textbox area then textbox are getting filtered and group according to the encClientId but this cross table is not filtering and grouping according to the EncClientId

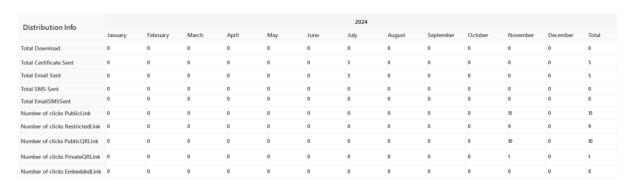

Suppose

I have Total User and Total Participant in the textbox are above the table

For EncClientId = _EICc8mvaz_f62OpbNP1pw==

Total User Total Participant

44 444

For EncClientId = 34sTwA6hW_3DJINxfUa9kA==

Total User Total Participant

78 47
