Effects

Selected PC penis is not "Prehensile"

PC penis gains "Prehensile" flag

Consumption

(Obligatory Pre-use Cock Select Menu)

You unpackage the viridian medipen, shaking your head as you take note of the rather silly label, bearing the product name "Phalloflex" with an absurdly wiggly dick weaving its way in and

around each letter. Without much fanfare, you take hold of your {selected [pc.cock]} and press the injector to your shaft, jumping slightly once you feel a slight pinch.

Gain Prehensile Flag:

You feel an almost painful tightness in your cock as it immediately stiffens, bowing back once it near-instantaneously reaches full mast. Suddenly, pressure begins to well up at your [pc.sheath], only to slowly work its way up to your pre-drooling [pc.cockHead]. The process is agonizingly slow, and your attempts to speed it up by jerking your [pc.cockShape] tool serve no use but to give you some insight into the developments the injection has set into motion. You feel your cock rippling in your grasp, the muscles remodeling themselves gradually as the tension within your phallus works its way along your length, as if being coaxed through coaxed through by the shifting of your [pc.cock]'s internal workings. After what feels like an eternity, the knot of pressure pushing through your shaft pulses its way out through your [pc.cockHead]. [pc.Cum] {squirts/sprays/geysers} out of your cumslit as if a blockage was just removed, and your newly remodeled cock swings about wildly in an attempt to paint as much of the ground before you as possible.

You focus as hard as you can to bring your sinuous member to heel, slowly acclimating to the newfound control you have over your masculine organ. You manage to get a grip just as the last spurts of [pc.cumNoun] are released, taking a moment to practice giving it a wiggle. **Your [pc.cockShape] cock has become prehensile!**
