

Luckily, you are a good wizard [마법사 \(mabeobsa\)](#) and you can repair paragraphs!

Walk around the room and type out the **six paragraphs you've repaired** below:

1. One type of energy is this image is kinetic. An example of this is when rupaul is modelling. Another type is sound. The example in the image of this energy is music while they modelling. The first example of modelling, is the type of energy called kinetic because she is moving.
2. Light energy is the only form of energy that we can actually see directly. It can also be transformed from chemical potential energy. Sound and light are similar in that they can both be converted into other forms of energy. They are similar because are forms of energy that travels in waves. Light travels faster.
3. Goku is able to fly and create balls of heat energy which can kill people. The other type of energy is kinetic energy that is shown by the characters as them flying and battling.

4. One type of energy in this image is light. An example of this is sound. Another type is the music coming from the speakers. The example in this image of that energy
5. Food: chemical potential and kinetic energy are what's in our photo. This created by the food source. The second energy, kinetic energy which is a energy that's well known as movement energy. Which is a body possess by virtue of being motion.
6. In this picture someone is using gravitational potential energy because he is able to fly and now is planning to land. Another energy in this picture is sound energy because you can hear gunshots around you and when you play Fortnite, you could hear each other;s footsteps so you could be alert.

Emma woke up at 12:00 her stomach was growling so she got out of her bed. She went in the freezer got a frozen pizza put it in the burning oven waited for 20 minutes. Took the pizza out and it was nice and hot (it was radiating heat energy) and yumm.
