

Expanding allotted memory for Project zomboid current 4/24/2021

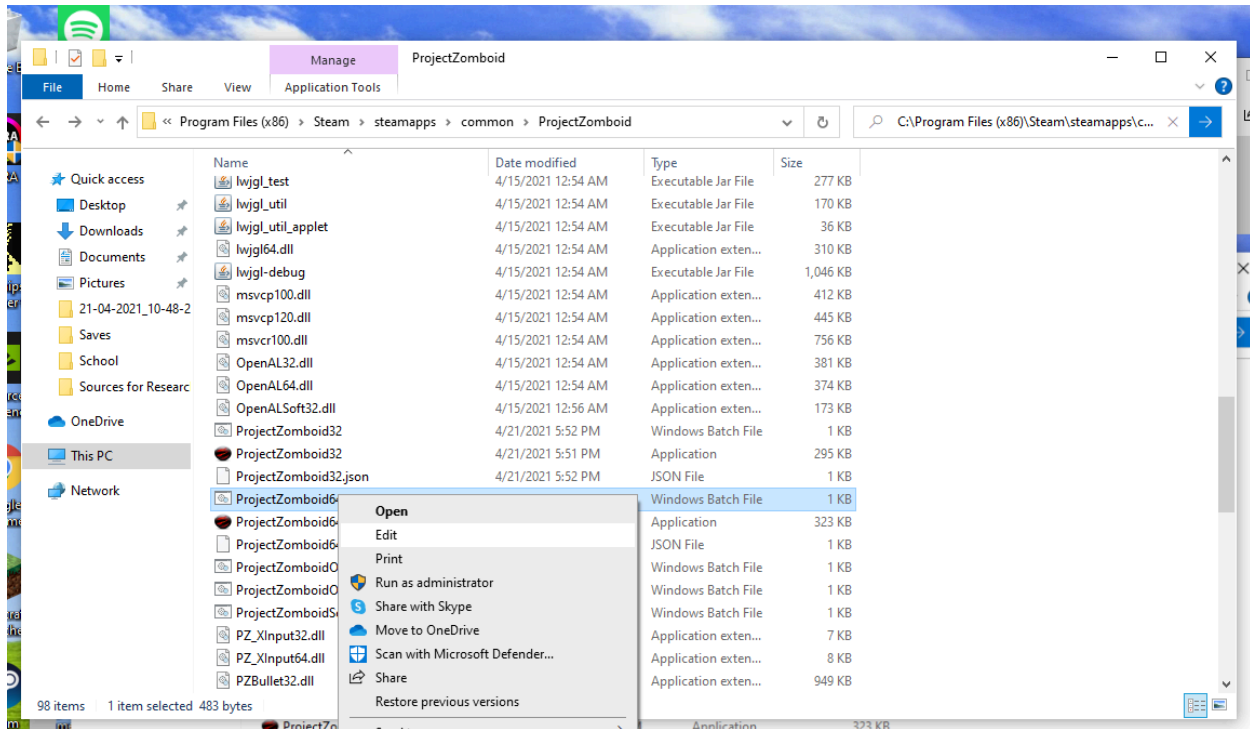

- Head on over to C:\Program Files (x86)\Steam\steamapps\common\ProjectZomboid on your home drive. Looks something like this

- Select the file “projectzomboid64.bat” be sure to pay attention to the file type (highlighted), as you need to edit the batch file responsible for launching the game.

- Right click this file and select Edit, or Open with and select notepad, depending on the operating system.

- Go to the variables underlined in red (Xms & Xmx), and adjust them as you see fit. I use G to designate Gigs, however you can leave the native m format and just do some math.
