Submission form

Around 800 words in total. The word counts below are a guide, not a limit. Write for a reader outside your subfield and define any acronym on first use.

Main contact:

1. The work and its outputs

~200 words

What was done, by whom, over what period, and what it produced. Methods and processes belong here.

2. The ELIXIR contribution

~150 words

Which route applies, and what membership, funding, networks or infrastructure made possible that would not have happened otherwise. Be specific rather than generous.

3. Outcomes and impact, with evidence

~300 words

What changed for others, and what difference that change made. Users gained, adoption figures, funding secured, citations in policy or guidance, partnerships formed, user testimony, changes to institutional practice. State the counterfactual where you can (what would have not happened without ELIXIR's involvement?)

4. Open science, knowledge exchange and research culture

~150 words

Outputs made openly available, standards adopted, materials reused by others, people trained, and how the team worked. This section is scored.

Supporting links (up to five)

One per line. Use these for evidence rather than for background.
