

Prefabricated 'LEGO Brick' modules for Gateway airports

Prefabricated modules are offered for use in the construction of Gateway airports. New modules are continuously being added. Each module resides on the Gateway with a unique scenery ID – grouped within airport code 'LEGO'.

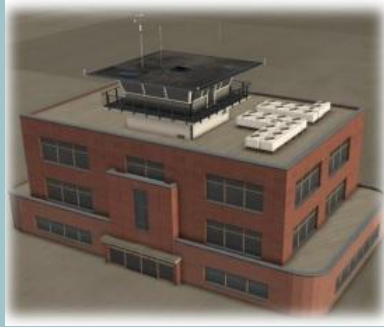

Gateway artists may import the submission into their WED project, using the following method:

- Open YOUR airport in WED;
- Import the desired LEGO module (File | Import from Airport Scenery Gateway - specify code LEGO, then pick the submission scenery ID you want - see pictures below);
- Make YOUR airport active (select the airport name in the hierarchy pane, then click Airport | Edit airport_name);
- Use the marquee tool to select the LEGO module you previously imported - **do not include the adjacent helipad**;
- Select Edit | Duplicate | Duplicate + Move to (YOUR airport);
- Delete the LEGO airport from your hierarchy;
