This is a plugin that contains fast language switching using a keyboard shortcut. Made in connection with the appearance of new languages in Ue5.4.
Settings-by default, changing languages is organized by Left Shift + Z
However, you can change the keys in Editor Settings/Change Language.
The order of keys in Change Language Combo Keys doesn't matter. Please note that the combination should not be responsible for anything else in Unreal Engine.

You can also specify two languages to switch between. Languages are usually specified in a short format.

You can find out the short format by moving the mouse cursor over the language designation in the settings.
