How will life in the future be different from life today?

Tera's Ideas:

Intro - Describe life **now**; list 3 things you think will be different in the **future** (3 sentences)

Now: laptops, ipads, **hybrid** cars, internet & social media

Future: 1) more clean energy, 2) fewer **borders**, and 3) more organic food

Body - Give specific examples/ describe more about the **first thing** (4-5 sentences)

clean energy

already have **solar** energy

wind and solar power

hybrid cars or use bikes

oil and fossil **fuels** gone

Body - Give specific examples/ describe more about the **second thing** (4-5 sentences)

fewer **borders**

internet, social media, and globalization

world economy

less conflict

universal education

Body - Give specific examples/ describe more about the **third thing** (4-5 sentences)

organic, locally grown food

grow food

safer and healthier

cleaner for the environment
less chemicals and wasted **transportation**

Conclusion - Review your ideas of how things will be different: Will it be better or worse in the future?(3 sentences)

Already we have laptops, ipads, hybrid cars
better in the future
more clean energy
more peace
healthier food

My Ideas:

*Intro - Describe life **now**: list 3 things you think will be different in the **future** (3 sentences)*

Now:

Future: 1) 2) 3)

*Body - Give **specific examples**/ describe more about the **first thing** (4-5 sentences)*

1)

*Body - Give **specific examples**/ describe more about the **second thing** (4-5 sentences)*

2)

*Body - Give **specific examples**/ describe more about the **third thing** (4-5 sentences)*

3)

Conclusion - Review your ideas of how things will be different: Will it be better or worse in the future?(3 sentences)

better or worse?

Today, we have many advances in technology. We have small laptops and ipads. People are connected through the internet and social media. More and more people are using clean energy and driving **hybrid** cars. And, people are also starting to be more concerned about healthy, organic food. I think that all of these things are good things, and life will only get better in the future because of more clean energy, fewer borders, and locally grown, organic food.

In the future, I think that people will rely on clean energy more than we do today. **Solar** and wind energy are popular now, but I think that in the future, these will be some of the only forms of energy. We know that fossil fuels won't last forever, and they are bad for the environment. So, in the future, I think that everyone will drive electric or hydrogen-powered cars, and no one will use gasoline or coal anymore.

Another positive change in the future will be a decrease in wars and conflicts. Because of technology like the internet and social media, I think that there will be fewer **borders** in the future. People won't be so concerned about the boundaries between nations because they will understand that we are all very closely connected. In the future, I think the world will be very globalized, and all of the economies in the world will be so dependent on one another for success that no country will want to fight another country. In the future, we will have more peace.

Finally, in the future, people will eat more organic, locally grown food because there won't be any more gasoline to transport food over long distances any more. Also, people will only want to eat food that is fresh and free of dangerous chemicals and pesticides. In the future, many people will grow their own food because it will be less expensive and more environmentally friendly. Since people will be growing a lot of their own food, or buying food from local farmers, there will be less hunger and disease.

As you can see, life in the future will be much better than life today. The earth will be healthier because there will be less **pollution** since people will be using clean energy and growing their own food instead of transporting it long distances. **Global warming** will not be a big problem in the future, because we will take better care of our environment. Also, there will be fewer deaths from wars and diseases because people will understand that we are all connected because of technology like the internet and social media, and they will eat healthier because locally-grown, organic food will be more popular.
