

What each section within a part of the video refers to

- **Editable:** Things you can change to your needs.
 - **Plain text:** You don't need to edit these and can use for all kinds of projects
-

Creating Prompt: Create a professional vertical reel around 30 seconds from the raw office footage in this project, titled "How We Make Videos at Jim Fahad Digital."

First, analyze all the clips to understand the activities shown. The Reel should tell a clear story of our video production process:

1. Finding video ideas based on audience interests
2. Researching topics and testing tools
3. Making necessary assets for the video
4. Reviewing and developing the assets for recording
4. Setting up the camera and recording
5. Editing the footages

Select the strongest clips, remove unnecessary pauses, and arrange them into a logical, engaging sequence. Only show activities supported by the footage.

Start with a strong visual hook. Add meaningful on-screen text for each stage, clean transitions, and suitable background music. No AI voiceover.

Use your own editorial judgment for clip selection, cuts, pacing, text, and overall visual style. Keep it modern, professional, and natural without excessive effects.

Format: 9:16, 1080×1920, optimized for Instagram Reels and YouTube Shorts.

Use HyperFrames to create and render the finished video.
