

“Magnetism is the King of All Secrets.” Paracelus

- All bodies are radiating light
- All cells in the body emit an electromagnetic energy. The heart produces the largest measurable field of biomagnetism, scientifically measurable up to 40 feet from the body.
- The hands of advanced practitioners of arts such as Reiki, Qigong and other healing traditions produce measurably larger fields of biomagnetism than the norm.
- The electromagnetism in the air has an average frequency of 7Hz. This electromagnetism ever present in the air is caused from the worldwide lightening going on. That 7Hz is the same frequency of energy that when present in our brains is associated with mind/body healing and creative genius and it has been shown in scientific studies to be an essential requirement for physical and psychological health. Our sense(s) are the connecting link to this energy. Therefore, when in fearful clinging or self obsessing we are not spatially aware and not connected with this energy.

Life's Magnetic Nature

Examples of life's magnetic nature are now plentiful. Many creatures, such as homing pigeons, butterflies, and bees navigate using Earth's magnetic field. Even humans can sense magnetic direction. These abilities, in part, appear to be mediated through a magnetic substance called magnetite, which has been discovered in the tissue, including the human brain, of many living things. Researchers have found magnetite clusters near the brain's all-important, magnetically sensitive *pineal gland*, which secretes hormones affecting the entire body. Also, there is a concentration of magnetite in the nose root. When the air flows over it magnetism is activated.

Not only are we affected by magnetic fields but we also generate them. For example, scientists can measure the brain and heart's magnetic fields with instruments called the magnetoencephalograph and magnetocardiogram, respectively.

Life's magnetic potential is so great that we can even defy gravity under the right circumstances. For example, scientists can levitate frogs by using high-intensity magnetic fields. When subjected to such strong fields, spinning electrons within the frog align themselves to cumulatively create a small magnetic field. Like a compass needle repulsed by a bar magnet, the large external field repels the frog's small field sufficiently to counteract gravity.

History

Magnetism has always been a part of mankind's healing. Many indigenous and ancient civilizations - including the Hebrews, Arabs, Indians, Chinese, Egyptians, and Greeks - used magnets for healing. According to Legend, Cleopatra wore a magnetic amulet on her forehead to preserve her youth; this placement put it near the brain's magnetically sensitive pineal gland.

One of the more influential figures in magnetic-healing history was the 15th century physician Paracelus, who helped to bring medicine out of the Dark Ages. Supposedly, the inspiration for Goethe's Dr. Faustus, Paracelus had visionary insights on the role of energetic forces, including magnetism, in healing.

These insights anticipated by nearly 500 years the underlying concepts of modern mind-body disciplines, such as psychoneuroimmunology and many holistic approaches. Basically, Paracelus believed that magnetic force could energize the body and promote self-healing. His work greatly influenced Mesmer.

In America, magnet use soared after the Civil War. People could even order the devices through the Sears Roebuck catalog. Turn-of-the-century medical texts devoted chapters to the subject.

Magnetoception In Human Beings

Magnetic bones have been found in the human nose, specifically the [sphenoidal/ethmoid sinuses](#)[6] Beginning in the late 1970s, the group of [Robin Baker](#) at the [University of Manchester](#) began to conduct experiments that exhibited magnetoception in humans: people were disoriented and then asked about certain directions; their answers were more accurate if there was no magnet attached to their head.[7] Other scientists have maintained they could not reproduce these results though the evidence from both sides remains contentious.[8] Recently some other evidence for human magnetoception has been put forward: low-frequency magnetic fields can produce an [evoked response](#) in the brains of human subjects.[9]

[University of Manchester](#)

*By breathing with the nose. The electromagnetism in the air run through the magnetite in the nose activating and charging the body.

Here's some more science facts:

Science can measure when a woman is ovulating through detecting electromagnetic changes in her fingertips and from electromagnetic measurements from many other areas of the body as well. Each event in the body had a unique magnetic signature. The same is true for events in our world. Each event can be measured with a unique electromagnetic frequency.

Do we have an aura? Does this aura communicate with environment non verbally on a cellular level? Yes. We know that one person's biomagnetic field causes changes in the other. The person with the higher amplitude tends to cause entrainment of the other.

The first detection of biomagnetism streaming into and out of the body is recorded as far back as 1930. So, may I ask you again...Do we have an aura?

So, since we have these fields and the health of these fields determines the health of our lives. Let's create some coherence wherever distortion exists. A diseased organ for example produces an incoherent magnetic field. It's all distorted.

We practice transforming the bad thoughts and habits producing 'bad energy' in your life. How, by admitting, accepting and bringing through good sources of feeling. It is that simple.

Again, this is a feeling process. Thinking can only be a catalyst. We must all evolve and to do so we must develop our qualities of feeling.

- Is there detectable information in the magnetic fields that we sense?
- Please describe what the phrase 'Magic in the Air' means to you?
- A heaviness in the air? What's that mean. Is it purely psychological interpretation or can a room actually have a 'vibe' that we can pick up on?
- When a great person walks in the room we might say. He or she 'lit' up the whole room. Note: It is a scientific fact that bodies emit light and the healthier the body/mind the more electromagnetism and light are

emitted. So, do certain people literally light up the room. Yes! Science fact. Yes!

Note:

Please ponder what 'Fresh air on the inside' means to you. Write about it either in your mind just as if you were writing on paper or on actual paper/computer.

More Facts:

- Each cell in the body is a little magnetic with a north and south pole of energy, The cell itself can store and release electromagnetism.
- Since there's a strong concentration of magnetic in the pineal gland, brain and spine and magnetic frequencies of very specific types are emitted by the heart, brain in measurable ways could there be exchanges of 'psychic magnetism' going on?
- The body as a whole has a north and south pole of magnetism.
- So does the earth.
- So does each galaxy.

On another note-

- When a fetus is formed the heart starts beating first, before the brain is activated. The heart therefore is functioning without any brain in the fetus body.
- Again I restate what Paraclese said. Paraclese was the founder of Democracy and one of the smartest persons in history. He said..."Magnetism is the king of all secrets"...Why would he say that?
- Could the magnetism emitted and received by our bodies and minds transmitting psychic information?

Here's a model of how healing happens:

1. Connection with The earth's magnetic field and (The Celestial Field...both cushioned in space.
2. Bio magnetic pulsations in harmony with the Schumann resonance (A major electromagnetic energy that is in the air caused by the accumulative lightning strikes occurring around the world.
3. Pineal gland secretions and magnetite bearing tissue increasing the coherence and amplitude of biomagnetism.

4. Perineural system
5. Projected biomagnetic field
6. Injury repair

James Oschman...The science of Energy

Medicine

That is a strong scientifically verified 6 point outline that can help anyone seeking energy medicine enlightenment, meditation etc.

The external magnetic fields are meant to be connected with and channeled through our systems. After all, attempting to ignore the vast expanse of nature doesn't work because we are all...everything connected.

4% Salt in oceans and our bodies – Is there some connection between our bodies and oceans

28 days skin to create new skin

Brain cells 12 times more oxygen/energy then all the other cells in the body.

50 Trillion Cells – Each one a magnet. Each cell has a north and south pole of magnetism exactly like a bar magnet. Can you imagine the energetic information?

Super coherence

Structures, Functions and Systems of the Brain

Frontal Lobe: This is the area which is responsible for thought, emotion, speech and skilled movements. This is a problem-solver.

Temporal Lobe: This area recognizes sights and sounds and helps with memory storage.

Cerebellum: The cerebellum coordinates muscular movement and balance.

Parietal Lobe: The parietal lobe perceives sensations such as touch, pain and temperature. It understands speech and language and expresses thoughts.

Occipital Lobe: It detects and interprets visual images.

Thalamus: It relays incoming information to the cerebral cortex.

Brain Stem: It relays incoming information to the cerebral cortex.

Limbic System: It holds ancient memory, recalling it in pictures and symbols, not language.

Reticular Activating System: This is the part of your brain which brings into conscious awareness that which will fulfill

your expectations...that, like a self-fulfilling prophecy, which will be created.

Amygdale: Recent research indicates that the amygdale may stimulate and awaken the frontal lobe of the brain. This in turn will assist in stimulating and awakening the third eye chakra.

WORCESTER, Mass., June 21 (UPI) -- A protein in the human eye may have the ability to sense the Earth's magnetic field in the same way migrating animals do, U.S. researchers say.

While migratory birds and sea turtles are known to have the ability to sense the planet's magnetic field as an aid to navigating the long-distance migratory voyages they undertake, humans are widely assumed not to have an innate magnetic sense.

However, researchers at the University of Massachusetts Medical School have found that a protein expressed in the human retina can sense magnetic fields when implanted into *Drosophila* fruit flies, reopening an area of sensory biology in humans for further exploration, a UMMS release reported Tuesday.

In many migratory animals, the light-sensitive chemical reactions involving the flavoprotein cryptochrome, or CRY, are thought to play an important role in the ability to sense the globe's magnetic field.

To test whether the human cryptochrome 2 protein, hCRY2, has a similar magnetic sensory ability, researchers created a transgenic *Drosophila* model lacking its native cryptochrome protein but expressing hCRY2 instead.

They showed that these transgenic flies were able to sense and respond to an electric-coil-generated magnetic field.

These findings demonstrate that hCRY2 has the molecular capability to function in a magnetic sensing system, the researchers said.

"Additional research on magneto sensitivity in humans at the behavioral level, with particular emphasis on the influence of magnetic field on visual function, rather than non-visual navigation, would be informative," researcher Steven Reppert wrote in an article published in the journal *Nature Communications*.

EPI GENETIC CONTROL

We now know scientifically that we can transform the switches of our genes. In fact we are doing it all the time according to our interpretations. What we believe and how thoroughly we believe it determines many of these controls. Therefore the believing itself is an action we should practice for the upgrade of our paradigm. Faithing is another way of believing...hoping etc. The idea is to 'faith' our way into a great transformation of atmosphere felt within the body around it and through psychic space.

The biological rhythm resonates inside the body and together with everything else in the universe!

The circulatory system is an excellent conductor of electricity. This current generates a magnetic field. The heart field is the most powerful field and can be measured 40 feet from the body using a SQUID (Superconducting Quantum Interference Device*).

The field generated by the hands can be increased 1000 fold through intention and can become stronger than the heart's field. Hands also emit light and infrasound.

*** SQUIDS are very sensitive magnetometers used to measure extremely small magnetic fields, based on superconducting loops. The extreme sensitivity of SQUIDS makes them ideal for studies in biology.**

Just as there are electrocardiograms (ECGs), electroencephalograms (EEGs) and electromyograms, the corresponding magnetocardiograms, magnetoencephalograms and magnetomyograms can be measured.

Keep in mind that magnetic fields are not attenuated by tissues as electrical fields are.

Let's remember that every organ in the body has a resonance.

The heart electrical-magnetic signature:

- is conducted to every cell in the body through the circulatory system,
- extends from the body inducing energy flows in people around and
- is conducted via the cellular matrix.

How this happens?

Rather than a “bag of fluid” the cell is now recognized as filled with a cytoplasmatic matrix or cytoskeleton composed of filaments, tubes, fibers and trabeculae with virtually all the water inside the cell being bound to the cellular framework. (Cope, 1967; Ling, 1992; Damadian, 1971).

The boundaries between the cell environment, the cell interior, and the genetic material are not sharp or impermeable.

Enzymes are attached to the cell structure and metabolic processes are conducted via structural pathways. Likewise, the nucleus contains a nuclear matrix.

The intracellular matrix is connected across the cell surface with the connective tissue system, which are “trans-membrane” linking molecules.

When you touch the skin, you are actually contacting a continuous interconnected webwork that extends throughout the body. (Ellison 1984; Oschman 1994; Pienta & Coffey 1991). Liquid crystalline structures are the rule in living organisms (as collagen, actin-myosin, rods and cones, myelin sheaths, phospholipids, chlorophyll, etc.). The molecules within the body, including the water, are aligned in a liquid crystalline continuum and move coherently together.

The entire living matrix is simultaneously a mechanical, vibrational or oscillatory, energetic, electronic, and informational network (Pienta & Coffey 1991, Oschman 1994)

“Life is too rapid and subtle to be explained by slow-moving chemical reactions and nerve impulses.” - Albert Szent-Gyorgyi - Nobel prize winner

Properties of the Living Matrix (Oschman, Energy Medicine)

1. All of the great systems of the body (circulation, nervous system, musculoskeletal system, digestive tract, organs and glands) are covered with material that is part of a continuous connective tissue fabric.
2. The connective tissues form a mechanical continuum, extending throughout the body, even into the innermost parts of each cell.
3. The connective tissues determine the overall shape of the organism as well as the detailed architecture of its parts.
4. All movement is created by tensions carried through the connective tissue fabric.
5. Each tension, compression and movement causes the crystalline lattice of the connective tissues to generate bioelectronic signals that are precisely characteristic of those tensions, compressions and movements.
6. The connective tissue fabric is a semiconducting communication network that can carry the bioelectronic signals between every part of the body and every other part.

Some Views of the Living Matrix: (Oschman, Energy Medicine)

The proteins in the body are semiconductors. Semiconductors can make miniature electronic devices such as switches, amplifiers, diodes, detectors, oscillators and memory devices.

“Molecules do not have to touch each other to interact. Energy can flow through...the electromagnetic field...The electromagnetic field, along with water, forms the matrix of life. Water...can form structures that transmit energy.” (Szent-Gyorgi, 1988)

“All parts of the living matrix set up vibrations that move about within the organism and that are radiated into the environment at many different frequencies, including visible and near visible light frequencies.” (Frolich)

The cytoskeleton behaves like a Tensegrity* structure. (Donald Ingber)

*** Tensegrity is an architectural and energetic concept developed by R. Buckminster Fuller. It describes a structure that retains its integrity under tension. Fuller creates robust structures from minimal amounts of material, describing a structure that retains its integrity under tension. A tensegrity system is characterized by a continuous tensional network (tendons) supported by a discontinuous set of compressive elements (struts).**

Through the many approaches to bodywork, the tensegrity view on the body opens new avenues of holistic strategy for understanding how the body works, how it compensates, and how to understand some otherwise incomprehensible behaviors.

Tensegrity accounts for the ability of the body to absorb impacts without being damaged. Mechanical energy flows away from a site of impact through the tensegrous living matrix. The more flexible and balanced the network the more readily it absorbs shocks and converts them into information rather than damage. The tensegrity matrix is replicated at every level of the organism.

The perineural system

Robert Becker, an American Orthopedic Surgeon spent no less than 3 decades, on experimental science on animals concerning regeneration and healing. He found clues to the healing process in the long-discarded theory that electricity is vital to life.

He describes what he believes to be two separate nervous systems, one of which is responsible for the generation of the channels or meridians of energy flow of the vital energies.

In the developing nervous system outside the CNS, perineural cells, cells which support the nerves in many ways, form first and the nerves grow along the paths taken by the perineural cells. Then certain perineural cells called Schwann cells wrap themselves around the nerve axons. One result is more rapid nerve transmission of impulse. Within the CNS, the perineural cells outnumber the nerve cells by a vast majority.

Oscillations of the heart's and brain's electrical activity form a conductor that are propagated through the entire body.

The main tissue that acts as a circuitry system is the peripheral nerves and the perineural connective tissue cells that constitute more than half of the cells in the brain. Perineural cells encase every nerve fiber; down to their finest terminations throughout the body.

Other tissues spread themselves in continuous layers of connective tissue in the body: the vascular system is surrounded with perivascular connective tissue; the lymphatic system with perilymphatic connective tissue; the muscular system with myofascia; and the bones with the periosteum.

Conceptually, this highway of connective tissue forms what is known as the 'Living Matrix'. It encompasses all of these connective tissue systems, including the cellular and nuclear scaffolds within them.

The body like other items of circuitry which we buy requires balance, order, structure and flexibility to function: effectively, efficiently and preventively.

As we begin to appreciate the delicate and specific way that the body needs to function without dis-order we can start to begin to understand what happens when it all goes wrong. Circuitry requires the body to be wired up in a way that allows all biological systems to communicate 24/7 autonomically and voluntarily.

When we are exposed to physical and/or emotional trauma a disruption is caused along the connective pathways in a specific region of the body as well as to the surrounding and other pathways leading all the way to the brain. For as long as there is trauma and the related memory patterns then dis-order physical pains and physiological deterioration will stay in place.

Michael Cohen's simple analogy is to that of the traffic lights failing at a busy central w:st="on" style="margin-top: 0px; margin-right: 0px; margin-bottom: 0px; margin-left: 0px; padding-top: 0px; padding-right: 0px; padding-bottom: 0px; padding-left: 0px; "London junction during peak hours. Not only will it cause chaos to those drivers in the immediate vicinity but before long it is causing backups to the wider area as well as a nightmare to the controllers let alone the commuters, businesses, families and every other person who is reliant on someone stuck in the traffic.

The perineural system is a (DC) direct current communication system that establishes a 'current of injury' that controls injury repair. The current of injury is generated at the site of a wound, and continues until repair is complete. One function of the current is to alert the rest of the body to the location and extent of an injury.

Injured cells give off light. The injury potential is a wave of energy emitted from the site of injury. The centriole is the eye of the cell. Light can regulate cells and cell division is activated by light.

It has been suggested that the current of injury is not confined to the skin, but will arise in any tissue, epidermal, vascular, muscular, nervous, or bone, that is injured. Which systems are activated will depend on the depth and severity of the injury. This perspective is leading to a detailed explanation of how the body coordinates its responses to injuries of all kinds."

Growing new nerves

Reshaping the energy field

Reshaping physiology

Reshaping our quantum energetic presence.....

The intention for us in studying these notes is to garner a belief. What is that belief? That who we are is more clearly understood as a field of energy more then just an arm, leg...etc. There is consciousness with each one of us and that field of perception, practiced brings many benefits.

The relationship between horny and healthy

Here are some reasons for being sexually active:

1. Happiness:

One of the primary reasons why people have sex is the pleasure which they receive through orgasms, or just through the intimacy and physical closeness. Regular sex sessions will keep the pleasure coming in, and you will feel much happier for it, day in and day out. All that pleasure will make you feel much happier and you will be able to face each day with confidence and a spring in your step. Your self image will improve, and you will find yourself attracting more members of the opposite sex.

2. Stress Buster:

Being sexually active will reduce your stress levels drastically. Your mood will improve considerably, and the happiness you feel will help you handle your stress better.

3. Live Longer:

Orgasms release a special hormone called the DHEA (Dehydroepiandrosterone). This hormone acts as a mood lifter and also boosts up the immune system. The hormone can also repair cell damage, helps improve your thought process and also works to keep your

skin healthier. As little as two orgasms a week can boost up the number of years you are likely to survive.

4. Health Benefits:

Being sexually active will shoot up your fitness levels. Regular sexual activity keeps your heart healthy and in top condition. As a result, you are not likely to have a heart attack anytime soon. The chances of you receiving a heart attack are cut down by half if you have sex at least twice a week.

Regular sexual activity increases your rate of blood circulation. As a result, all the cells in your body receive a lot of oxygen and blood and remain healthy. Your brain benefits the most. Aside from a better thought process, all the dead cells are cleared up and you are left feeling healthier.

Being sexually active will also help your overall fitness. Your stamina will improve, and you will be able to walk farther and run faster with comparatively little fatigue. You are also likely to lose weight on a regular basis. You can lose whole pounds if you go about sex with vigor and regularity. You are also likely to sleep better.

5. Hormonal Boost:

Regular sex releases useful hormones in the body. There is an increase in testosterone and estrogen levels in both males and females. Testosterone will help your body build stronger muscles and bones, while estrogen will help protect your heart.

6. Fight Diseases:

Regular session in bed will let your body counter diseases faster. You will also be less likely to suffer from Prostate cancer.

Sex will make you feel loved, happy and healthy. You will enjoy your life to the fullest.

Female Pheromones

[female libido enhancement](#), [female enhancement](#), [female pheromones](#)

Have you ever wondered why just by her presence in a room, a woman can attract the attention of the males in the room to her? Well, the human system of attraction is geared towards one final goal; reproduction. To achieve this goal, evolution has come up with radical system to instigate the process of attraction.

Body language, facial expressions and verbal communication can all become a part of the process of attraction. Yet unseen and unsuspected, invisible and odorless hormones are given off by the human body to attract a person of the opposite sex, through bodily fluids like sweat. These hormones are referred to as pheromones, and are natural tools that facilitate female and male libido enhancement and ultimately performance enhancement in males and females.

Female pheromones are of a different nature than that of pheromones in men. Androstenone is the primary pheromone which is secreted by the male, while females give off a more subtle chemical called the copulin. The female pheromone copulin is secreted by the vagina. This female pheromone is odorless, but still can bring out quite an effect by [enhancing libido](#) and providing [performance enhancement](#) to males.

The working of the female pheromone, and by extension all pheromones in males and females, is quite complex and sometimes plain strange. Let's take an example. Sometimes you look at a beautiful woman, perfect in all aspects with a great body, open smile and great intelligence added to an already explosive mix. Yet, very strangely, you find that you are not in the least attracted to her, but instead feel drawn strongly to her average friend. Don't worry if this ever happens to you, you haven't suddenly lost your masculinity. Instead, your body has picked up the pheromones exuded by the beautiful one, and your body finds that you are not compatible. Instead, you are far more compatible with the other average woman. After all, pheromones are utilized by the body in the search for the perfect mate. Female pheromones can affect the female menstrual cycle in strange ways. If pheromones are given out prior to ovulation, the menstrual cycle reduces in length.

If pheromones are produced during the onset of the menstrual cycle, it lengthens significantly. Female pheromones can also be the decisive factor in the determination of sexual orientation.

There are multiple studies dealing with female pheromones and all pheromones as a whole, whether human or otherwise. Yet, these studies have not been able to showcase significant and concrete results. This failure in research is unexpected, especially in today's world with the high level of technological development, and the exact nature of pheromones remains shrouded in mystery. Doubtless the world will have to wait for some breakthrough in research to understand pheromones exactly.

Today, female pheromones are used practically to provide [sexual enhancement](#) during sex. They are available in the form of sprays, which the woman sprays all over herself before or during the act of lovemaking. Pheromones enhance the quality and the length of a sexual encounter, and even today remain a strong tool for sexual enhancement.

Male Pheromones

[male performance enhancement](#), [male enhancement](#), [male pheromones](#)

Evolutionary design has always had a goal in mind; continuation of the species. So, sex is not just a physical act of pleasure, but also is a means to an end. For the purpose of reproduction, man has been given many characteristics that will enable him to attract a member of the opposite sex.

The face, body structure, presence or absence of muscle, hair and other physical factors has an impact on how males are perceived by females. Yet, there are other factors that affect sexual attraction, and they are not so blatantly obvious. Pheromone is one such factor which has a big effect on sexual attraction. Male pheromones are similar to [female pheromones](#), yet there are subtle differences between them.

Pheromones are invisible, minute chemicals given off by the body. They possess no odor, and cannot be detected by smell. They are chemical signals which are received by the member of the opposite sex, which affect the receiver response. When a male gives out pheromones, they travel directly to the vomeronasal organ in the female, which is present in the nostril. Later, the male pheromones force a response in the female from a part in the brain that is connected with intense emotions and feelings. If you have ever wondered why women are so emotional, then pheromones make up a large part of the answer. The [female libido](#) is inextricably linked with their emotions. Male pheromones are targeted towards bringing out a psychological response in females.

Male pheromones contain information about the male's genetic makeup of the immune system. The female brain then processes this information to find out whether the female's immune system is compatible with the male. The male is compatible with the female if the code of their immune system is similar. Compatibility results in sexual attraction, whereas no compatibility means little or no attraction.

The primary places in which the male body emits pheromones are the armpits and the pubic region. There is large concentration of apocrine glands in the armpit, which has led to the armpit being called axillary organ. Women are attracted to bodily sweat from males because of this reason. Fresh sweat does not have any odor. Only when it bacteria begin to act on sweat does an odor come out. Yet, even if the female is attracted to the male, excessive pheromones are a dampener, and the attraction is reduced considerably.

Pheromones are like a layer of added sexual attraction. Pheromones are slowly being used in products for [male performance enhancement](#) as well as [female libido enhancement](#), and have shown great results so far. They are available in the form of perfume sprays and oils. They are helpful in arousing women, as well as men, during sex. Sex lasts longer, and is more meaningful, with the help of these pheromones. Pheromone sprays also act better than normal perfume in attracting members of the opposite sex.

Research has yet to fully pin down the nature of pheromones. But as the nature of pheromones becomes clearer, the quality of pheromone products available will only get better and better.

<http://www.sexually-active.net/reasons-for-being-sexually-active>

"Do not burn yourself out. It is not enough to fight for the land; it is even more important to enjoy it. While you can. While it is still there. So get out there and mess around with your friends, ramble out yonder and explore the forests, encounter the grizz, climb the mountains, bag the peaks. *Run the rivers, breathe deep of that yet sweet and lucid air, sit quietly for a while and contemplate the precious stillness, that lovely, mysterious and awesome space.* Enjoy yourselves, keep your brain in your head and your head firmly attached to the body, the body [active](#) and alive, and I promise you this much: I promise you this one sweet victory over our enemies, over those deskbound people with their hearts in a [safe deposit box](#) and their eyes hypnotized by desk calculators. I promise you this: You will outlive the bastards."

[-Edward Abbey](#)

Different magnetic fields applied in some hospitals to the body are used to heal:
15 HrZ for Capillary 10HrZ Ligament healing 7HrZ Bone growth
2HrZ nerve regeneration

- These fields change from moment to moment in relation to events taking place inside the body.
- These fields give a more clear representation of what is going on in the body than classical electrical diagnostic tools such as the electrocardiogram and the electroencephalogram.
- The connective tissue fabric is a semiconducting communication network that carries the bioelectric signals between every part of the body and every other part.
- Extraordinarily large biomagnetic fields emanate from the hands of practitioners of musicians and practitioners of a large variety of healing techniques including: Qigong, Yoga, Meditation, Zen etc. The fields have been measured with a simple magnetometer. These fields all pulse from .3 30 HrZ with an average centered around 8-10 HrZ. ?These experiments have been done by many leading universities and medical institutions with results duplicating.
- Their fields were 1000 times stronger than the field of the heart and 1,000,000 times stronger than the fields of the brain.
- The magnetic fields of people almost always entrain each other.
- **Every blood cell has a dipole magnetic field generated by the cell and has the capacity to store and release bio-magnetism for certain functions.**

- Biomagnetism activates the pituitary gland releases human growth hormone.

High level hormonal nectar=Increased cell replacement=longevity...!!!

This has correlates in all the sciences of longevity:

In all systems of 'Energy Medicine'-Historical and Modern create a sweet saliva. A very special saliva that is 'the nectar of immortality'...Certainly this is the activation of the pituitary and penial glands and consequent supercoherence of brainwaves.

In Yoga Amrita is said to come from there...The nectar of The Gods.

- **Decreased resistance in a wire create more power to flow through**
- **The Schumann resonance is made from the lightening strikes going on around the world in between earth and atmosphere. ...from 1-40 Hz with the average of 7-8 Hz. The same frequency we need to have healthier brains. The same frequency emitted from the hands of healers.**
- Magnetic Field and hemoglobin...Iron filings and a magnet. **What makes blood red is Iron.** The magnetic field of the heart arranges these 'iron fillings' in a pattern representing the health of the hearts field. The heart create the bioelectricmagnetism that literally runs the functions of the body.
- Organisms are capable of sensing the intensity, polarity and direction of the geomagnetic field because of magnetite bearing tissues which are within boidies; this accounts for the sixth sense.

These are qualities inside every magnetic field. I like the phrase psychic magnetism. Do you think there could be any truth to that or is it just fantasy?

Sexual stimulation and conscentration both produce an immediately measurable increase in biomagnetism.
Divine sensuality is the path of sexuality.
