407 Eco-Visualization

Class Code: wupfyb5

In this project, students will think about environmental issues in their communities and reflect on the impact the problems have on nature and people.

Students will sketch ideas for the final project to determine what types of art materials they will use. Students will choose any type of medium (paint, pencil, collage, cardboard, found objects, etc) that will best show the message they are trying to give about environmentalism and their community.
