 [Free Project Management Decision Making Guidance Framework](#)

 [Sign up for Bespoke PM Career Guidance](#)

Dear Project Professional,

Welcome to our weekly deep dive into the fundamentals of project management. For those new to the newsletter, you are joining a community of over **2000+**  project professionals, seeking to turbocharge their careers to the next level!

Today, we're tackling a crucial aspect which defines the success of any project: **Effective Decision-Making**

The many complexities inherent in project management, introduce significant and numerous hurdles to effective decision-making.

***That's why:** I want to share with you the [3Cs Framework](#) for decision making. Use it to quickly undertake decision making by systematically assessing the problem, analyzing the critical components and then coming up with a range of potential solutions.*

Nicola Benjamin - PMCW3C Framework Implementation Guide

Projects, by their nature, involve a multitude of variables that demand careful consideration.

The pressure to meet deadlines intensifies the decision-making process, often making choices feel like high-stake bets. Uncertainty in the business environment adds yet another layer of difficulty, as project managers navigate through unpredictable circumstances.

Striking a balance between the need for quick decisions and the requirement for thorough analysis is an ongoing challenge.

In addition, human factors, like cognitive biases and emotional influences, can impact objectivity. In essence, decision-making in project management involves a delicate equilibrium between analysis and intuition, speed and thoroughness, all within a constantly evolving environment.

Navigating these challenges is fundamental to achieving effective decision-making in project management.

As project managers, we often find ourselves at crossroads, facing decisions that can shape the course of our projects. The challenge lies in making the right decisions at the right time.

There are a number of well respected models to support individuals in making better decisions. In the section below, I will outline the approach that I have found to be most beneficial in my own experience as a project manager.

The 3C method is a simple concept that has its origins in Lean methodology. The 3Cs refer to: **Concern**, **Cause**, and **Countermeasure**, it provides a simple framework that project managers can apply to any situation. And use it to quickly undertake decision making by systematically assessing the issue, analyzing the critical components and then coming up with a range of potential solutions.

In a [article shared by Rob Walley](#) of the Bourton Group, a firm of specialist operational management consultants, the 3Cs are outlined as follows:

What is the Concern? 🙄: This is the first step in the problem-solving process. It involves identifying and clearly defining the problem or concern that needs to be addressed. The problem should be stated in a specific and clear manner, so everyone involved understands what needs to be solved. It's essential to have a well-defined concern to move forward effectively.

What is the Cause? 🧐: Once the concern is identified, the next step is to analyze the underlying causes of the problem. Understanding the root causes of the issue helps in developing a more effective and long-lasting solution. This step often involves asking [“why”](#) multiple times to dig deeper and uncover the fundamental reasons behind the concern. Using a framework such as the [‘5-Whys-model’](#) can consistently bring you to the root-cause of an issue, simply by challenging you to go one level deeper in your assessment.

[5-Whys Template](#)

What is the Countermeasure? 🚦: After identifying the concern and its root causes, the final step is to develop and implement countermeasures to address the problem. Countermeasures are specific actions, strategies, or solutions aimed at eliminating or mitigating the causes of the concern. These actions should be well thought-out, practical, and targeted at resolving the problem.

To enhance decision-making prowess, there are a number of specific actions that are universally applicable.

I have listed below several of the most common countermeasures at your disposal as a PM. Consider adding the following as your first line approach countermeasures:

Embrace Data-Driven Insights 📊:

Base decisions on solid data rather than gut feelings. Leverage project management tools and analytics to gather accurate, real-time information for informed choices.

Stakeholder Involvement 🤝:

Ensure key stakeholders are part of the decision-making process. Their insights can provide valuable perspectives and uncover potential blind spots.

Risk Mitigation Strategies ⚠️:

Anticipate potential risks and develop strategies to mitigate them. A proactive approach minimizes the impact of unforeseen challenges.

Effective Communication 🗣️:

Create a culture of transparent and open communication. Clearly articulate the decision-making process and outcomes to the project team, fostering a sense of involvement and shared responsibility.

Learn from Past Decisions ↺️:

Conduct post-mortem analyses on past projects. Identify what worked well and what didn't. Apply these lessons to refine your decision-making approach.

Instead of viewing decisions as isolated events, consider them as part of a continuous improvement process. One that will help to strengthen and optimize your project's progression. By using a framework such as the 3C-model you can implement your decisions with greater clarity of thought, building confidence in your operations as a project manager and credibility in your ability to lead, challenge and address the uncertainty that is part of the fast-paced world of project management.

Choose the opportunities on your project to not only lead but to inspire. Embrace a growth mindset, where each of your decisions, whether successful or not, contributes to your professional development as well as the overall success of your projects.

Here's to confident leadership, continuous improvement, and the unwavering pursuit of project success. Onward and upward!

Best regards,

New - YouTube PM Tutorials 🎬

👂👂👂 **Watch and Subscribe to the PMCW Youtube channel. Over the coming months we will be turning each newsletter into short 3-minute tutorials. So you can consume PM career advice in a perfect bite-sized learning burst.**

📈🔗 [**Career Advice Surgery**](#) Are you stuck and looking for support in identifying your next career move? Preparing for either your **PMP Qualification** or **Chartership (ChPP)**? Contact me for bespoke coaching and create a blueprint for your career success. Sessions start from just \$100/hr. Your **1 hour, one-to-one** session will include a capability review, career analysis, skills

gap support and development planning. You will also receive ongoing **follow-up** and progress reviews.

 The [***PM Accelerator Boot Camp \(Live Training\)***](#) - Unlock exponential growth in your career and **000's** to your income. Join a series of intensive workshops that will deliver specific training around core technical, soft and hard PM skills. And give you tools for better sector analysis, interview skills, develop your personal branding and increase your in-role influence.

 [***Get Unlimited Access to Career Coaching***](#) join my **premium monthly subscription** (\$239/month). **Unlimited** number of **coaching and mentoring** sessions during the month, including **24/7 email support**. **No contract** and **pause anytime**.

 [***Read my post on the top 20 books for ambitious project managers***](#). If you read just one of these books a month I guarantee you will be ahead of 90% of the competition in the workplace. Remember you can also access my **PM Skills ebook collection** at any time for free to further help your self-study journey

NOTE: All PMCW services are invoiced and are fully expensable through your organization.
