

CRYPTO-MONARCHIST

PARTY PLATFORM

Crypto-Monarchy is an architectural synthesis of three political frameworks: **Platonic Republicanism, Hobbesian Monarchism, and Crypto-Anarchism.** Particular ideological underpinnings have been pulled from each framework, but the general philosophy behind Crypto-Monarchy is for the reduction of state power and unification of state force under a centralized source with the acceleration of the frictionless flow of state power by that source through technologically-aided trustless, open, and decentralized systems.

GENERAL PLATFORM POINTS

- The minimization of State corruption is ineluctable, therefore a technologically based Crypto-Monarchy (read: trustless elections qua leviathan autonomous digital nation) must become an immutable feature of government.
 - The complete removal of the Electoral College, Supreme Court, and House of Representatives, along with the flensing of the election process for President are necessary to secure this governmental architecture.
 - The representative features akin to Plato's Republic will be kept and re-worked to fully comply to the Monarchy.
 - TradLib principles of freedom and liberty will be maintained on a constitutional level.
 - Promotion of the arts and sciences for the advancement of culture and society under the Monarchy will be pushed.
 - Reworking of education to be more like traditional studies with focus on Philosophy and Formal Logic alongside CIS tracks for the advancement of thought and informational security will be pushed.
 - Mandatory testing involving logic games will sort society based on Fluid Intelligence whereby the upper 33% of scorers qualify for Vanguard and upper 1% qualify for Kingships (congress).
 - A Vanguard class of society will serve as the military + police (like ancient Athens or modern Israel).
 - The upper 5% of the Vanguard will be made into the revival of the Praetorian Guard (secret service).
