Ordinal Numbers

Gather a collection of objects (toy animals for example).
Line the animals in a row of 5 left to right.

Ask: Which animal is first?
Ask: Which animal is last?

Have your child point to the first object and name the position of each object in order.
Then randomly ask your child to point to an object in a particular position, such as the third animal, the fifth animal, and so on.

Have the child rearrange the animals and repeat the process.
