

Adapt Delta Release Notes

2022.1.31 (June 2024)

Adapt Engine 2022.1.31 Release has been tested on the following browsers: Chrome 93.0 and above, and Firefox 92. Compatibility mode in browsers must be turned off.

Note: Once you have the 2022.1.31 delta in place, please clear your **Browser Cache** before logging in.

Adapt Delta 2024.1.31 Release Notes

Adapt Engine Release Notes	Issue ID
Fixed security issues where a URL to load a report from the reporting server could be used from another browser without logging into Adapt.	AD-12705
Fixed a bug where a user could not log into the ADA if the system had LDS (Local Document Storage) configured.	AD-12837
Protected against a data-related issue where an entity with an illegal ID of 0 would break the entity ownership checks and cause a system error.	AD-12836
Protected against a potential XSS exploit in sysadmin domain profile resume import settings page.	AD-12834
Protected against a potential XSS exploit in the sysadmin resume import schema detection engine tab.	AD-12801
Fixed a bug caused by recent security work that prevented the sysadmin domain profile dashboard tab from saving changes.	AD-12809
Protected against a potential XSS exploit in the sysadmin resume import schema detection engine tab.	AD-12801
Fixed encoding issue when displaying non ascii characters on the home page history widget.	AD-12824
Fixed a bug in sysadmin resume import where selecting a role that had no parent would cause the page to fail to load in future.	AD-12822

Fixed bug where fast find results were not correctly highlighting multi-word pattern matches.	AD-12821
Fixed a bug where recent security work prevented the ability to drag and drop a CV into Adapt.	AD-12820
Added some defensive code to prevent an error when saving domain settings where one of the colour options in task settings was null.	AD-12819
Improved display feedback on sysadmin task dashboard document category tab as it didn't refresh the screen properly after saving, showing a blank field.	AD-12810
Work to secure sysadmin against potential XSS attacks (Part 6).	AD-12813
Protected against a potential XSS exploit in the sysadmin document templates UI.	AD-12797
Protected against a potential XSS exploit in the sysadmin REST API mapping UI.	AD-12796
Fixed a bug in sysadmin related to JSON serialization of numbers where IDs were not converted correctly after upgrading the Jackson library.	AD-12811
Fixed a bug where changes to CSS in one area of sysadmin resulted in scrollbars going missing in other areas.	AD-12812
Removal of the deprecated Internal Email functionality caused a bug that prevented you from saving changes on the domain profiles email tab.	AD-12807
Protected against a potential XSS exploit in the sysadmin domain settings email notification section.	AD-12782
Fixed a bug related to dynamic codes where the primary key for the database table could give a PK violation with permissible data.	AD-12770
Protected against a potential XSS exploit in the UK search UI.	AD-12799
Work to secure sysadmin against potential XSS attacks (Part 5).	AD-12786
Fixed a bug where repeating segments in a document template were creating a new table for each entry rather than just a new row in the existing table.	AD-12800
Fixed a display bug caused by the iframe removal work that caused the StartDate to be displayed as blank on Tasks.	AD-12794
Work to secure sysadmin against potential XSS attacks (Part 4).	AD-12777
Fixed a bug caused by recent security work that prevented you from cleanly cancelling a change to the credentials store.	AD-12780

Fixed a bug where the run at login BO would also run if you refreshed the browser. Now it only runs once at login.	AD-12778
Fixed a potential XSS exploit on the sysadmin credential store page.	AD-12776
Prevented a potential XSS exploit on the sysadmin domain settings page.	AD-12771
Fixed a bug caused by recent security work that made it impossible to delete a group in sysadmin.	AD-12772
Prevented a potential XSS exploit on the sysadmin dynamic codes page.	AD-12769
Fixed a bug caused by recent security work that caused the usergroups section to be hidden on the sysadmin codes & groups page.	AD-12775
Fixed a (Chrome only) problem with CSS styling on the sysadmin domain branding page.	AD-12768
Fixed a bug caused by recent security work that prevented you from changing the description of a nested code.	AD-12767
Fixed a bug where the _SEGMENTMODE macro was only set for the first segment in an entity you open. Switching segments after that just re-used the value from the first segment and didn't check if it should be different.	AD-12765
Work to secure sysadmin against potential XSS attacks (Part 3)	AD-12764
Work to secure sysadmin against potential XSS attacks (Part 2)	AD-12763
Fixed an issue where ADA was timing out because the timeout value was set to 2 seconds in sysadmin, but it should have displayed an error message letting you know this, which was failing to show on screen and only appearing in the console log. Now you get a proper modal alert with the timeout error.	AD-12762
Work to secure sysadmin against potential XSS attacks (Part 1).	AD-12754
Secured a potential XSS exploit in Data Admin profiles.	AD-12551
Fixed a minor security issue where the session cookie wasn't being instantly invalidated and destroyed when logging out of sysadmin.	AD-12685
We have added CSRF security tokens to all document library functionality that adds removes or modifies documents.	AD-12703
Fixed a bug where recent security work prevented you from deleting a language.	AD-12848
Fixed display issue where the bottom border of buttons was missing.	AD-12847

Fixed a bug where sysadmin formatters became inaccessible if they had multilingual changes for a language that had been deleted.	AD-12835
An extension to AD-12815 that fixes a potential XSS exploit that the original fix missed.	AD-12833
Fixed a bug caused by recent security work where renaming a column in a sysadmin formatter did not persist the changes.	AD-12827
Fixed a bug caused by recent security work that prevented formatter changes from being saved. The display looked correct but the changes were not persisted.	AD-12817
Made changes to fix a potential XSS exploit in the formatter column tab.	AD-12815
Fixed a bug that was causing the formatter to load a blank label for the equals to option in the formatter conditions which led to it appear to be missing.	AD-12816
Fixed a bug caused by recent security work where the reset button on a formatter was no longer being displayed.	AD-12814
Fixed a bug caused by a recent fix for fast find result highlighting that prevented add & remove favourite from working.	AD-13031
Fixed a bug caused by recent security work that prevented you from deleting documents from an embedded document control.	AD-13032
Fixed a display issue where tabbing past the last control on a workflow would show a corrupted version of the composition dialog at the bottom of the page.	AD-13033
Fixed a bug where you couldn't create a code group in sysadmin if the namespace visibility was set to modify or view only.	AD-13036
Work to secure sysadmin against potential XSS attacks.	AD-12813
Fixed an issue caused by the iframe removal work that prevented the embedded LinkedIn provisioning page from loading correctly.	AD-12826
Fixed a bug where the sysadmin document types list failed to load when the domain namespace visibility was set to Modify or View Only.	AD-13038
Fixed a potential XSS exploit when a document category name contained a maliciously constructed value.	AD-13035
Fixed bug where cancelling the creation of a new document category would result in a system error being displayed.	AD-13040

Fixed an issue where a malicious category name could break the HTML of the sysadmin document category page.	AD-13042
Patched a potential XSS exploit in the document library's delete category functionality.	AD-13041
