Conflict of Interest

A conflict of interest can also be known as a 'competing interest'. A conflict of interest can occur when you, your employer, or your sponsor have a financial, commercial, legal, or professional relationship with other organizations, or with the people working with them, that could influence your research.

When you submit your paper to the journal full disclosure is required. The journal editor will first use this information to inform their editorial decisions. Then they will publish such disclosures to assist readers in evaluating the article. Or, the editor may instead decide not to publish your article based on any declared conflict of interest.

Conflict of interest can be financial or non-financial in nature. To maintain transparency, any associations that can be perceived by others as a conflict of interest must also be declared.

Some examples of financial conflicts of interests include:

- Employment or voluntary involvement
- Collaborations with advocacy groups relating to the content of the article
- Grants from an entity, paid to the author or organization
- Personal fees received by the authors as honoraria, royalties, consulting fees, lecture fees, or testimonies
- Patents held or pending by the authors, their institutions, funding organizations, or licensed to an entity, whether earning royalties or not
- Royalties being received by the authors or their institutions

- Stock or share ownership
- Benefits related to the development of products as an outcome of the work

Examples of non-financial conflicts of interests:

- Receipt of drugs, specialist equipment, tools, computer programs, or digital applications
- Access to data repositories, archival resources, and museum collections, by an entity that might benefit, or be at a disadvantage financially or reputationally from the published findings
- Holding a position on the boards of industry bodies or private companies that might benefit, or be at a disadvantage financially or reputationally from the published findings
- Writing assistance or administrative support from a person or organization that might benefit, or be at a disadvantage from the published findings
- Personal, political, religious, ideological, academic, and intellectual competing interests that are perceived to be relevant to the published content
- Involvement in legal action related to the work

Sponsorship of clinical trials

Authors employed by pharmaceutical companies or other organizations that sponsor clinical trials must declare this as a competing interest. Authors should adhere to the **Good Publication Guidelines for Pharmaceutical Companies (GPP3)**, which provides guidance to ensure responsible and ethical standards are maintained.

A.I.M.C.J will not publish articles advertising commercial products.

Disclosure statement

You should also include a relevant disclosure statement with the text of your article.

Conflict of interest: sample disclosure statements:

By the policy of AIMCJ and my ethical obligations as a researcher, I hereby disclose that I [have financial and/or business interests in] [am a consultant to] [receive funding from] (please delete as appropriate) a company that may be impacted by the research detailed in the enclosed paper. I have fully disclosed these interests to AIMCJ and have established an approved plan to manage any potential conflicts that may arise from this involvement.

This research is sponsored by [Company A] and may lead to the development of products that could be licensed to [Company B], in which I possess a business and/or financial interest. I have also fully disclosed these interests to AIMCJ and have implemented an approved plan to address any potential conflicts resulting from this arrangement.

Please you must confirm the following check list:

1. Have the authors or their institution ever received compensation or services from a third party (e.g., government agency, commercial organization, or private foundation) in relation to any aspect of the submitted manuscript, including, but not limited to, grants, study design, or statistical analysis? (Yes) (No)
2. Do the authors possess any patents, whether planned, pending, or issued, that are broadly related to the work? (Yes) (No)
3. Are there any potential conflicts of interest associated with this submission?
(Yes) (No)
4. Are there any other relationships or activities that readers might reasonably perceive as having influenced, or that may appear to potentially influence, the information presented by the authors in the submitted manuscript? (Yes) (No)
5. Has the work covered in this manuscript, involving either experimental animals or human participants, been conducted with the ethical approval of all relevant bodies? (Yes) (No)

Important: if there are no competing interests to declare, authors should include a statement in the article to confirm that there are no relevant financial or non-financial competing interests to report.

If there is no disclosure, we will then publish the following statement: *“No potential competing interest was reported by the author(s).”*
