Antonella - 34 years old

(30-65 years)

She is entering a stage where her wrinkles are starting to show on her skin.

Current State

Antonella is entering a stage where her skin is losing its natural elasticity and she is showing signs of aging with the occasional wrinkle on her face.

She has tried a few creams for about 1 year, but they do not meet her requirements, she does not find one that has the great results that she expects.

Dream state

(main objective) She wants to feel the skin on her face well hydrated, and to help reverse her aging. Get back the skin you had before and look pretty and young.

Road blocks:

Till now she does not know this new cream (she has been trying different creams for a long time but she still has not found one that meets what she wants).

Solution:

A cream that helps her feel her face is more hydrated without her eyes watering when applying it. That it is not excessively fat and that it does not take hours to absorb. So that she feels comfortable throughout the day.

Products:

Anti-aging moisturizing cream for dry skin, composed of the 5 types of hyaluronic acid condensed in a cream that instantly redensifies the skin.

It is absorbed very quickly into the skin.

Not Statements

Having cared for your skin since you were young

Anti-aging creams and masks

DIC

SL: ¡No one takes this anti-aging cream from me anymore!

After trying creams and creams I found gold trying this wonder

87% of creams take too long to absorb and this cream has really surprised me how quickly it absorbs into the skin.

As the sponge absorbs water.

The fact is that you can put it on in the morning as it dries very quickly and you feel very comfortable for the rest of the day.

And at night...

You no longer have to wait for it to dry before going to bed.

Also, having delicate skin is much more appreciated, it is an incredible feeling of relief.

PAS

SL: I couldn't continue with the skin in that state.

You may know it, have experienced it, or still have it.

But it is something that a percentage of women (not least) live with.

Sensitive skin. It is usually heavy due to that horrible sensation of irritation and itching on the skin that does not leave you alone.

— Oh!! Just imagining it makes me feel itchy.

And in most cases it is usually related to a lack of hydration or dry skin.

But that irritating itch that appears sometimes (out of nowhere) and keeps you restless, you can start to solve it by following a few simple steps — but so effective (believe me, i talk by self experience).

"I have already tried several creams to try to solve it and they do not help me in everything I need"

It is not a simple cream that apart from a few minutes of relaxation only gives you hope, no.

But while most are left here waiting for a miracle,

you could live with truly hydrated and soothed skin, leaving irritation behind.
