Unit 7 - WA10.10 - Unit Pricing and Currency Exchange Practice Questions #4

Be sure to input your answers here to receive credit: <https://bit.ly/3nRD85k>

1. The markup on a bicycle in a sporting goods store is 145%. The bicycle's wholesale price is \$375.00. What is the markup in dollars?
2. Marco buys a certain brand of shampoo from a supplier at \$8.39 per bottle. He sells it to his customers at a markup of 32%. What would the markup be?
3. A hanbok is a formal, traditional outfit of Korean clothing. At a markup of 45%, what would be the retail price for a child's hanbok with a wholesale price of \$123.65?
4. What should Max charge for a package of paper plates in his store if he bought them for \$8.50 and wants to make a 65% profit?
5. What would you have to pay for a jacket that is listed at \$74.25 if you live in a place where the only tax is 5% GST?
6. Find the total cost of a washing machine that is being sold for \$888.88 where PST is 5% and GST is 5%.
7. Calculate the HST (11%) on a return flight from Cranbrook, BC to Vancouver, BC that costs \$465.00.
8. If there is 5% GST and 7% PST. How much GST and PST would Krista pay on a can of paint priced at \$62.12?
9. A watch that Harry wants to buy sells for \$84.63 in BC where there is 12% HST. When he is on holiday in Alberta (where there is only the 5% GST), Harry sees the same watch for \$91.27.
 - a. How much is the watch in BC?
 - b. How much is the watch in Alberta?
 - c. Which watch should he buy?
