

Day 29/31 - \$0/\$74K Client Revenue

? Who You Are Now vs Who You Want to Be ?

- Now:
 - Brokie Job
 - Single
 - Debt up to my eyeballs
 - Skinny fat moving towards jacked
- Who You Want to Be:
 - Business Owner
 - Strong

🔥 Your Reason Why 🔥

I make shit happen. My why is because I fucking said so.

So I want to make \$10k per month + Rev share

Success metric:

☐ One 10k Retainer + Rev share

OR

☐ Two 5k Retainers + Rev share

OR

☐ Five 2k Retainers + Rev share

Current progress:

- ☒ ~~One 10% Rev share with first starter client~~
 - ☐ One 1k retainer client with Rev share
-

End day review: 09/11/24

Overall problems/mistakes throughout the day?

- Error Era. Nothing but bot failures and errors

Solutions to each mistake/problem?

- .Grit

60% complete with bot, every new step comes with hundreds of new problems.

- Client has a weird relationship with original developer and I am locked out of many features I need access to work smoothly

Giving the bot 4 hours, if I make no progress I need to shelve it to focus on the new tools

G Work Checklist

- ☒ ~~Use subconscious mind to update new G program and delete desires for anything that doesn't make me a G.~~
- ☒ ~~Take a few minutes to look at the overall playing field.~~

Day - 06.11.2024

- ☒ ~~Wake up 07h30~~
- ☒ ~~Read from the holy book 07h35~~
- ☒ ~~Started GWS 08h00~~

- ☒ Breakfast 10h16
- ☒ GWS 10h30
- ☒ Matrix job 11h30
- ☒ Train 14h30
- ☒ Matrix Job 15h10
- ☒ Watched PUC 18h00
- ☒ GWS 20h10
- ☒ Sleep 02h30

GWS Reflections:

What tasks/objectives did I demolish?

- Created workaround for bot since there were issues with the credentials

Problems/mistakes encountered?

- Innumerate
 - Struggled with CSV file formatting for data classification
 - Struggled with data fetching
 - Struggled with compatibility issues with each new workaround.
 - Either the results were shit
 - Or it would get half way and break
 - Or it would not work with the previous infrastructure
 - Now the fucking credentials on the plug in are spazzing, and my brain is too fried to make sense of it.

Solutions to each mistake/problem?

- Get some sleep
 - Give it a go in the morning, if after 4 hours it's not cracked switch to new tools to secure more resources.

☒ ~~GWS #1~~

- Tweaked dataset output with CSV file

☒ ~~GWS #2~~

- Tested variations of output, basic structure is working, now have two call options.

☒ ~~GWS #3~~

- Website integration has met another authentication snag, but this one looks solvable
