

Privacy Policy

Effective Date: August 2026

This Privacy Policy explains how Hardware Keys Tester handles information when you use the application.

Hardware Keys Tester is designed as an offline visual utility for testing hardware key events on Android devices. The app allows users to test volume buttons, the Back key, physical or Bluetooth keyboard keys, and supported gamepad controls while the application is open and focused.

Information We Collect

Hardware Keys Tester does not collect, transmit, sell, or share personal information.

The app does not collect names, email addresses, phone numbers, precise or approximate location, contacts, photos, videos, audio recordings, advertising identifiers, browsing history, payment information, or other personal data.

No user account or registration is required to use the application.

Key Event Processing

Hardware Keys Tester processes supported key events only while the application is open and focused.

Depending on the selected test, the app may process information such as key code, scan code, input source, device ID provided by Android input events, press and release actions, repeat count, press duration, and event timing.

This information is used only to provide the key-testing functionality of the application.

The app does not provide global key capture and does not monitor keyboard activity in other applications.

Users should not enter passwords, credentials, or other private text while using keyboard testing features.

Local Data Storage

Test sessions and application preferences are stored locally on the user's device.

Local information may include saved test sessions, event summaries, key statistics, favorites, settings, selected theme, duration thresholds, and other preferences required for the app's functionality.

This information is not uploaded to our servers or synchronized with cloud services.

Users can remove locally stored information through available application controls, by clearing application data, or by uninstalling the app.

Android Permissions

Hardware Keys Tester is designed to operate without Android runtime permissions for its described functionality.

The app does not request access to the camera, microphone, contacts, location, photos, media, external storage, notifications, accessibility services, or draw-over-other-apps functionality.

Hardware Keys Tester does not use accessibility services or background services to capture key events.

Internet Access

Hardware Keys Tester is designed to work offline.

The app does not require an internet connection for its key-testing features and does not use accounts, cloud synchronization, remote profiles, or online storage for test sessions.

Advertising

Hardware Keys Tester does not display third-party advertisements.

The application does not use advertising SDKs and does not intentionally collect or process the Android Advertising ID for advertising, profiling, or tracking.

Analytics and Tracking

Hardware Keys Tester does not use third-party analytics or behavioral tracking services.

Statistics displayed by the application are generated from test activity and stored locally on the device.

We do not use this information to create advertising profiles or track users across applications or websites.

Third-Party Libraries

Hardware Keys Tester may use standard Android SDK and AndroidX libraries required for application functionality, interface components, lifecycle management, local storage, and compatibility with supported Android versions.

Dependencies are reviewed before inclusion and are selected based on the functionality required by the application.

The app does not intentionally integrate advertising, analytics, social media, location tracking, or cloud-service SDKs.

Data Sharing

Because Hardware Keys Tester does not collect personal information for transmission to us, we do not sell, rent, trade, or share user personal information with advertisers, data brokers, analytics providers, or other third parties.

Locally generated test information remains on the user's device.

Data Retention

We do not maintain a remote database containing Hardware Keys Tester test sessions or user information.

Saved sessions, statistics, favorites, settings, and other locally generated information remain on the device until they are deleted by the user, application data is cleared, or the application is uninstalled.

Children's Privacy

Hardware Keys Tester does not knowingly collect personal information from children.

The application does not require users to create an account, submit personal information, or communicate with other users.

Security

Hardware Keys Tester minimizes data-related risks by processing key events locally and avoiding unnecessary network services, permissions, analytics, and tracking technologies.

Users remain responsible for the security of their Android device and should avoid entering sensitive information during keyboard testing.

Diagnostic Disclaimer

Hardware Keys Tester is a visual key-event testing utility and is not a certified hardware diagnostic tool.

Test results are approximate and depend on the key events received by Android while the application is open and focused.

For critical hardware problems or device diagnostics, users should consult a qualified professional service.

Changes to This Privacy Policy

We may update this Privacy Policy when the application's functionality, platform requirements, or applicable requirements change.

Updates will be reflected by revising the effective date of this Privacy Policy.
