

Rewilding Singapore With Wilder, More Diverse Habitats | Wild Urban Designs | CNA Documentary

[Mandai Wildlife Bridge](#) | Watch 13:18 min to 17.11 only

This video shows how urban infrastructure (roads etc) can disrupt ecosystems and how thoughtful planning (eco bridges etc) can restore them. Despite the disadvantages of modifying natural landscapes for human uses, it highlights the possibility of creating solutions that allow wildlife and humans to co-exists.

Discussion Questions:

1. Why was the Mandai Wildlife Bridge built? How effective would the bridge be in serving its purpose?
2. What are the potential conflicts between environment protection efforts and Singapore's development needs?
