### **Project Description**

This week's homework is to make a small web page introducing yourself to the class. Your web page will include several HTML features such as tags, lists, tables, and hyperlinks. Use your own creativity to show us who you are!

An example web page with pictures is in the instructions. You may use the example as a template for your own page, or choose to go your own way.

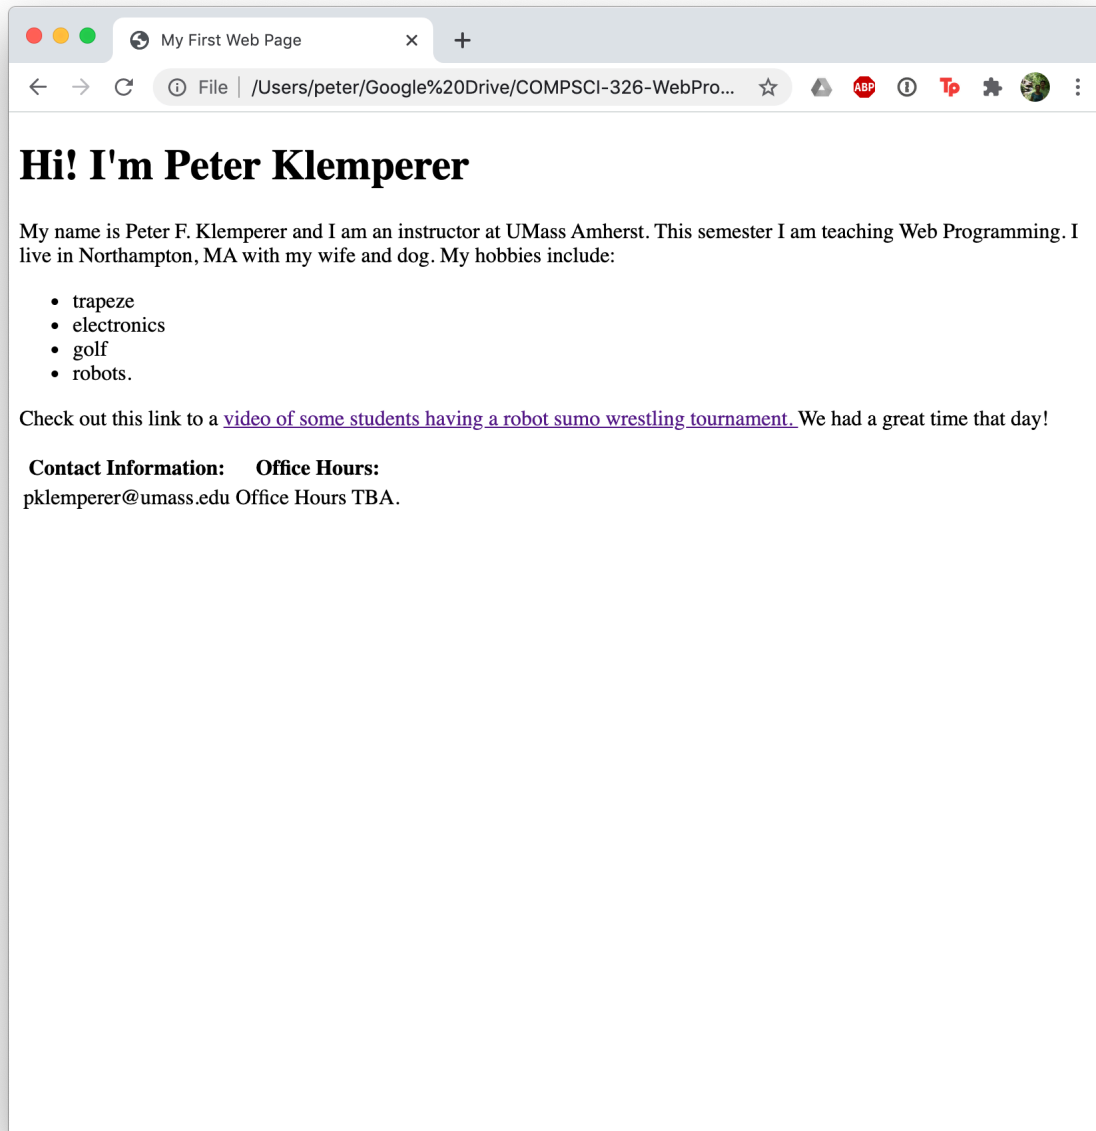

Be sure to include all of the features required by the grading rubric provided. Furthermore, be sure to review the Zybooks material before doing this homework as the book covers the steps writing this initial web page in detail. You may also wish to refer to the previous labs and assignments.

This is an individual assignment and you cannot share code; submissions will be run against plagiarism detection tools. Additionally, we will be spot checking the code for good coding practices. It is expected your code does not contain (1) extraneous variables/code, (2) missing semicolons, (3) missing curly braces, and (4) use of double equals. Furthermore you should use whitespace consistently and to make the code legible.

### **Turn-In Instructions**

Upload your completed index.html file to gradescope.

## Example Web Page

## Grading Rubric

- Filename is index.html
- Basic Tagging:
  - Demonstrates usage of <h1> tag
  - Demonstrates usage of <p> tag
- Demonstrates usage of a List
- Demonstrates usage of a Table with at least 2 rows and 2 columns
- Demonstrates usage of the anchor tag to create a hyperlink
- Text is written with correct english grammar
