

[vagrant, snapshot] How to enable vagrant snapshot

Jing, mqjing@gmail.com

Step 1: Install snapshot plugin

vagrant plugin install **vagrant-vbox-snapshot**

```
jing@jing-XPS-L412Z:~/Desktop/work/02_openstack_installation$ vagrant plugin install vagrant-vbox-snapshot
Installing the 'vagrant-vbox-snapshot' plugin. This can take a few minutes...
Installed the plugin 'vagrant-vbox-snapshot (0.0.5)'!
```

Step 2: Usage

vagrant snapshot **take** [vm-name] <SNAPSHOT_NAME> # take snapshot, labeled by NAME
vagrant snapshot **list** [vm-name] # list snapshots
vagrant snapshot **back** [vm-name] # restore last taken snapshot
vagrant snapshot **delete** [vm-name] <SNAPSHOT_NAME> # delete specified snapshot
vagrant snapshot **go** [vm-name] <SNAPSHOT_NAME> # restore specified snapshot

ex: Take a snapshot

```
jing@jing-XPS-L412Z:~/Desktop/work/02_openstack_installation$ vagrant snapshot take controller controller-installed
Taking snapshot controller-installed
0%...10%...20%...30%...40%...50%...60%...70%...80%...90%...100%
```
