### ABSTRACT

Abstracts are written in one paragraph consisting of 200 to 250 words. The abstract is a concise summary of the entire research paper and should include key elements such as background, research objectives, methods, results, and conclusions. The background should briefly describe the research problem and its significance. The research objective must be stated clearly. The methodology should be summarized to indicate how the study was conducted. The results should present the main findings, while the conclusion highlights the key takeaways and possible future research directions.

---

## INTRODUCTION

The introduction should provide the research background, state the research problem, and explain its significance. It should include a literature review to contextualize the study within existing research and highlight gaps that the current study aims to address. The research objectives should be clearly defined at the end of this section. The introduction should be written concisely, avoiding excessive detail.

## METHODOLOGY

This section should provide a detailed description of the research methods used, including study design, data collection techniques, data sources, and analysis methods. If experiments are involved, specify materials, equipment, and procedures used. If surveys or qualitative methods are employed, describe the sampling techniques and data processing methods. Ensure that the methodology is reproducible and well-documented.

## RESULT & DISCUSSION

The results section presents the findings of the research in a clear and logical manner. Data should be displayed using tables, figures, or graphs where appropriate. The discussion should interpret the findings, compare them with previous studies, and explain their significance. Any limitations of the study should also be acknowledged. Ensure that results and discussions are written concisely and directly relate to the research objectives.

## CONCLUSION

The conclusion should summarize the key findings of the study and highlight their implications. It should provide answers to the research objectives and mention any recommendations for future studies. The conclusion should be written succinctly without introducing new information.

## Figure

All figures (graphs, charts, diagrams, etc.) must be numbered sequentially (e.g., Figure 1, Figure 2) and should have clear, descriptive captions. Figures must be of high quality (minimum 300 dpi) and should be placed as close as possible to the related text. Figures should be cited in the text (e.g., "as shown in Figure 1").

Figure 1. Caption for figure Times New Roman 10 pt

### Table

Tables must be numbered sequentially (e.g., Table 1, Table 2) and include a descriptive title above the table. Each table should be referenced within the text (e.g., "as shown in Table 1"). Use a consistent and readable format. Tables should not duplicate information presented in the text but should complement the discussion.

Table 1  
The Significance of The Relationship in The Model

No.	Section	Length (in %)	Note
1	Introduction	15-20	-
2	Methodology	20-25	-
3	Result & Discussion	40-50	-
4	Conclusion	10-15	-

### Equations

Equations should be numbered consecutively within the text, with numbers enclosed in parentheses and aligned to the right margin (e.g., (1), (2)). Use appropriate mathematical notation and symbols, ensuring clarity and consistency. Equations should be referenced in the text (e.g., "as shown in Equation (1)"). Equations must be formatted using LaTeX or equation editors that ensure readability and compatibility with IEEE standards.

An example of an equation:

$$E = mc^2 \quad (1)$$

Where E is energy, m is mass, and c is the speed of light.

### ACKNOWLEDGMENT (optional)

This section is optional and should be included if there are funding sources, institutional support, or individuals who contributed significantly to the research but do not qualify for authorship. Keep acknowledgments brief and professional.

### REFERENCES

References **must have 15 minimal** sources and the citation and references uses IEEE format. All sources cited in the text must be listed in the reference section, and vice versa. Use recent and relevant references. Citations within the text should follow a numerical format in square brackets (e.g., [1], [2], [3]). A sample reference list entry is as follows:

[1] J. Smith, Technology and Education in the Digital Era, Springer, 2021.

[2] A. Johnson and B. Lee, "Innovations in Online Learning," IEEE Transactions on Education, vol. 65, no. 3, pp. 123-134, 2020.

Use reference management software such as Mendeley or Zotero to maintain accuracy.
