Identify Contributors for Whitepaper Development

Suggested questions to help guide

Where is data a major limitation for future development?

What are the priority research directions to enable data-driven discovery?

Are there any roadstops to the development of the field?

How do we avoid these roadblocks?

What are the key limitations of state-of-the-art tools in the context of scientific and engineering problems?

What insights from one scientific discipline would you expect to generalize to others?

What can AI do to advance other scientific and engineering areas?

How critical are replicability and access constraints?

How can education and community outreach about data science, Data, AI and ML speed up this process?
